CHAPTER 1

36 Sports Multiplication Challenges for Kids

1.1 Train Your Brain Like an Athlete Trains Their Body(TM)

Audience: General Public

Learning Level: Introductory

Purpose: Help children build multiplication understanding, confidence, reasoning, and problem-solving through sports-based practice.

CHAPTER 2

Printable PDF Overview

Multiplication can feel easier when it connects to something children already understand: sports.

In sports, athletes practice skills over and over. They miss shots, drop passes, lose points, try again, listen to coaches, adjust their strategy, and improve.

Learning math works the same way.

A child is not "bad at math" because they miss one problem. A

missed problem is a training rep for the brain.

CHAPTER 3

Children Do Not Need More Information

CHAPTER 4

They Need Stronger Understanding Systems

QRU Sports Intelligence Lab(TM) turns multiplication practice into athlete-style brain training.

Instead of learning multiplication only by memorizing facts, children learn to see multiplication as:

- Groups
- Patterns
- Repeated practice
- Strategy
- Teamwork
- Real-world problem solving

The learner becomes a Brain Athlete.

CHAPTER 5

Simple Definition

Multiplication means many equal groups combined.

Example:

If a basketball player makes 4 shots in each round and plays 3 rounds, that means:

$$4 + 4 + 4 = 12$$

Or:

$$4 \times 3 = 12$$

So, multiplication is a faster way to count equal groups.

CHAPTER 6

Vocabulary Decoder(TM)

6.1 Multiplication

Multi = many

Groups = sets of things

Multiplication means many groups combined.

6.2 Intelligence

Intelligence is the ability to:

- Learn
 - Understand
 - Adapt
 - Solve problems
 - Keep improving
-

Learning math is like practicing a sport.

One missed shot does not mean you are bad at basketball.

One wrong answer does not mean you are bad at math.

Both are training reps.

Each try helps your brain get stronger.

A Brain Athlete says:

- "I can practice."
 - "Mistakes help me improve."
 - "I can try a different strategy."
 - "Understanding creates confidence."
 - "I do not have to be perfect to get better."
-

Multiplication is not:

- A race to prove who is smartest
- Memorizing without understanding
- A reason to feel embarrassed
- A test of your worth
- Something only "math people" can learn

Multiplication is a skill.

Skills grow through practice.

Your role is to be the child's coach.

A good coach does not shame an athlete for missing.

A good coach helps the athlete notice, adjust, and try again.

When a child struggles, try saying:

- "Let's look at the groups."
- "What strategy could we try?"
- "What do you already know?"
- "Show me how you thought about it."
- "That mistake gave us information."

The goal is not perfection.

The goal is helping the child discover:

CHAPTER 7

"I can learn difficult things."

For each challenge:

1. Read the sports story.
2. Find the number of groups.
3. Find how many are in each group.
4. Write the multiplication sentence.
5. Solve.
6. Explain your thinking.

Example:

A soccer player scores 2 goals in each of 4 games. How many goals total?

Groups: 4 games

Number in each group: 2 goals

Multiplication sentence: $4 \times 2 = 8$

Answer: 8 goals

CHAPTER 8

Draw the Groups

8.1 Problem A

A baseball team practices 3 drills.

Each drill has 5 throws.

Draw 3 groups of 5.

Multiplication sentence:

$$3 \times 5 =$$

Answer:

8.2 Problem B

A swimmer swims 4 laps each day for 2 days.

Draw 2 groups of 4.

Multiplication sentence:

$$2 \times 4 =$$

Answer:

CHAPTER 9
