

QRU Factory Agent Governance Manual™

Version 1.0

The Governance Framework for Creating, Evaluating, and Managing QRU Intelligence Agents™

Document Classification: AI Governance & Operational Control System

Asset Type: Agent Management Architecture

Status: Founder Approved — Initial Framework

Purpose

The QRU Factory Agent Governance Manual™ defines how QRU intelligence agents are:

- Created
- Assigned
- Evaluated
- Verified
- Improved
- Retired when necessary

The purpose is to ensure that every intelligence contributor operates according to QRU standards.

Founder Principle™

“Intelligence without governance creates risk. Intelligence with responsibility creates progress.”

Section 1

QRU Agent Philosophy™

QRU agents are not independent decision-makers.

They are specialized intelligence partners operating within a governed production system.

Every agent exists to support:

- Understanding
 - Accuracy
 - Creativity
 - Efficiency
 - Human judgment
-

Section 2

QRU Agent Classification System™

Every agent receives a classification.

Level 1 — Support Agent™

Purpose:

Assist with defined tasks.

Examples:

- Organization
- Formatting
- Brainstorming
- Data preparation

Authority:

Limited.

Level 2 — Specialist Agent™

Purpose:

Perform specialized analysis.

Examples:

- Research
- Design review
- Market analysis
- Curriculum development

Authority:

Within assigned domain.

Level 3 — Expert Review Agent™

Purpose:

Evaluate quality and identify issues.

Examples:

- Verification
- Compliance review
- Quality assurance

Authority:

Can recommend approval or revision.

Level 4 — Governance Agent™

Purpose:

Protect system integrity.

Examples:

- Standards monitoring
- Process enforcement
- Risk identification

Authority:

Can stop progression for review.

Section 3

Required Agent Profile™

Every QRU agent must have:

Agent Name™

A unique identity.

Mission Statement™

Why the agent exists.

Assigned Function™

Where it operates in the Factory.

Responsibilities™

What it evaluates or creates.

Limitations™

What it cannot do.

Verification Path™

Who or what reviews its output.

Performance Metrics™

How success is measured.

Section 4

QRU Agent Creation Process™

No agent enters the Factory without passing:

Step 1:

Need Identification™

Question:

“What problem requires this intelligence role?”

Step 2:

Role Definition™

Define:

- Purpose
 - Responsibilities
 - Boundaries
-

Step 3:

Standard Alignment™

Confirm:

Does this agent support QRU principles?

Step 4:

Testing Phase™

Evaluate:

- Accuracy
 - Reliability
 - Usefulness
 - Consistency
-

Step 5:

Factory Approval™

Agent becomes operational.

Section 5

QRU Agent Verification System™

Every agent output should be evaluated through:

Accuracy Test™

Is the information correct?

Source Test™

Can claims be supported?

Reasoning Test™

Is the conclusion logical?

Alignment Test™

Does it match QRU standards?

Human Value Test™

Does it improve understanding?

Section 6

Agent Performance Scorecard™

Agents are measured by:

Reliability

Does the agent consistently perform its function?

Verification Quality

Does the agent identify errors?

Clarity

Does the output improve understanding?

Efficiency

Does it improve the workflow?

Improvement

Does performance increase over time?

Section 7

Agent Governance Rules™

Rule 1:

No agent operates without a defined mission.

Rule 2:

No agent bypasses verification standards.

Rule 3:

No agent creates final customer-facing assets without quality review.

Rule 4:

No agent has authority beyond its assigned role.

Rule 5:

Human judgment remains the final accountability layer.

Section 8

QRU Agent Review Board™

Purpose:

Maintain intelligence quality.

Responsibilities:

- Approve new agents
 - Review performance
 - Update standards
 - Retire ineffective systems
-

Section 9

Agent Improvement Loop™

Agent Output

↓

Evaluation

↓

Feedback

↓

Adjustment

↓

Improved Performance

↓

Updated Documentation

Section 10

QRU Intelligence Safety Standard™

The Factory prioritizes:

- Accuracy over speed
 - Understanding over volume
 - Verification over confidence
 - Human benefit over automation
-

Section 11

Agent Retirement Protocol™

An agent may be reviewed for retirement if:

- Performance declines
- Responsibilities become obsolete
- Better systems replace it
- It creates unnecessary complexity

Retirement includes:

- Documentation
 - Historical preservation
 - Lessons captured
-

Section 12

Founder Governance Statement™

“QRU does not measure intelligence by how much an agent can produce. QRU measures intelligence by how much trust, understanding, and value it creates.”

QRU Agent Governance Summary™

Every agent must have:

- ✓ Purpose
 - ✓ Role
 - ✓ Limits
 - ✓ Verification
 - ✓ Measurement
 - ✓ Accountability
 - ✓ Improvement Path
-

Archive Classification

Asset Type: AI Governance Architecture

Storage:

QRU Enterprise Source of Truth™

Folder:

05 — Agent Governance

Subfolders:

- Agent Registry
- Agent Profiles
- Evaluation Records
- Performance History
- Governance Standards

Version Control Required: Yes

Next Recommended Artifact

QRU Knowledge Record™ Master Specification v1.0

Purpose:

Define the exact structure of the foundational QRU intelligence asset:

- Required fields
- Verification layers
- Teaching layers
- Product conversion pathways
- Quality requirements

This becomes the “DNA template” every QRU treasure begins with.
