

QRU Knowledge Record™ Master Specification

Version 1.0

The Foundational Intelligence Asset Standard of the QRU Understanding Factory™

Document Classification: Core Knowledge Architecture Specification

Asset Type: Intelligence Asset Template / Production Standard

Status: Founder Approved — Initial Framework

Purpose

The QRU Knowledge Record™ Master Specification defines the required structure for creating, verifying, storing, expanding, and transforming every QRU Knowledge Record™.

A Knowledge Record™ is the foundational intelligence asset from which QRU products, lessons, media, and learning experiences are created.

Founder Principle™

“Every great product begins with a well-understood idea.”

Section 1

Definition of a QRU Knowledge Record™

A QRU Knowledge Record™ is:

A structured, verified, expandable intelligence asset designed to transform information into understanding and application.

It is not simply notes.

It is not simply research.

It is a reusable understanding engine.

Section 2

Knowledge Record Identity™

Every record receives:

Record ID

Example:

QRU-KR-00001

Title

Clear understanding topic.

Core Question™

The question this record answers.

Example:

“How does investing work?”

Audience

Who needs this understanding?

Examples:

- Children
- Students
- Parents
- Entrepreneurs
- Professionals

Version History

Tracks:

- Creation
- Updates
- Improvements

Section 3

QRU 36-Layer Intelligence Manufacturing Structure™

Each Knowledge Record moves through layered development.

Layer Group 1

Understanding Foundation™

1. Question Definition

What are we trying to understand?

2. Problem Identification

Why does this matter?

3. Context Mapping

Where does this exist in the world?

4. Vocabulary Foundation

What words must be understood?

Layer Group 2

Research Intelligence™

5. Source Collection

Gather information.

6. Source Evaluation

Assess reliability.

7. Evidence Mapping

Connect claims to support.

8. Research Summary

Capture findings.

Layer Group 3

Verification Architecture™

9. Accuracy Review

Is it correct?

10. Context Review

Is it fairly represented?

11. Bias Review

Are limitations identified?

12. Verification Approval

Ready for development.

Layer Group 4

Translation Intelligence™

13. Simplification

Remove unnecessary complexity.

14. Explanation

Create clear understanding.

15. Analogy Creation

Connect to familiar ideas.

16. Story Development

Make meaning memorable.

Layer Group 5

Teaching Architecture™

17. Learning Objectives

What should someone know?

18. Conversation Pathway

How should understanding develop?

19. Practice Application

How can it be used?

20. Assessment Design

How do we measure understanding?

Layer Group 6

Connection Intelligence™

21. Related Concepts

What connects to this?

22. Real-World Examples

Where does this appear?

23. Cross-Discipline Links

What other fields connect?

24. Future Implications

Why will this matter?

Layer Group 7

Product Manufacturing™

25. Product Opportunities

Possible outputs:

- Book
- Course
- Video
- Workbook
- Assessment

26. Audience Adaptations

How does it change for different learners?

27. Media Opportunities

How can it be communicated?

28. Marketing Translation

Why would someone value it?

Layer Group 8

Evolution & Improvement™

29. Feedback Collection

What did users say?

30. Performance Review

How did it perform?

31. Knowledge Updates

What changed?

32. Version Improvement

How does it get better?

Layer Group 9

Legacy Intelligence™

33. Long-Term Value

Will this matter later?

34. Generational Impact

Can it help future learners?

35. Preservation Standard

Should it be maintained?

36. Treasure Approval

Does it meet QRU standards?

Section 4

Knowledge Record Quality Gates™

Every record must pass:

Gate 1:

Truth

Is it accurate?

Gate 2:

Understanding

Can humans grasp it?

Gate 3:

Application

Can it improve decisions or actions?

Gate 4:

Experience

Can it become a meaningful learning experience?

Gate 5:

Legacy

Is it worthy of preservation?

Section 5

Knowledge Record Transformation Paths™

One Knowledge Record™ may become:

Education Products

- Lessons
 - Courses
 - Workbooks
 - Teacher resources
-

Publishing Products

- Books
 - Guides
 - Reference materials
-

Media Products

- Videos
 - Podcasts
 - Presentations
-

Technology Products

- AI learning tools
 - Digital experiences
-

Section 6

Knowledge Record Governance™

Every record maintains:

- Source history
 - Verification notes
 - Creation history
 - Contributors
 - Product connections
 - Revision history
-

Section 7

Knowledge Record Gold Standard™

A complete Knowledge Record™ should answer:

What is it?

Understanding.

Why does it matter?

Purpose.

How does it work?

Mechanism.

Where does it apply?

Connection.

What should someone do with it?

Action.

Section 8

Knowledge Record Factory Rule™

No product should begin with:

“What should we make?”

Every product begins with:

“What understanding should exist first?”

Founder Declaration™

“The Knowledge Record™ is the seed of the QRU ecosystem. Every book, course, lesson, and learning experience begins as an organized act of understanding.”

Archive Classification

Asset Type: Core QRU Intelligence Specification

Storage:

QRU Enterprise Source of Truth™

Folder:

03 — Knowledge Architecture

Subfolders:

- Knowledge Record Templates
- Completed Records
- Verification Files
- Product Connections
- Version History

Version Control Required: Yes

Next Recommended Artifact

QRU Product Assembly Blueprint™ v1.0

Purpose:

Define exactly how a completed Knowledge Record™ transforms into:

- A book
- A workbook
- A course
- A video
- A marketplace product

This completes the bridge from **knowledge creation** → **customer delivery**.
