- When to Seek Medical Guidance - ? Full Edition
- Sleep well. Rest often. Start tonight. - ? Full Edition

Sleep well. Rest often. Start tonight.

Recharge your body. Reset your mind. Protect your health.

Why Sleep Matters

Sleep is not "doing nothing." While you sleep, your body and brain are working.

Quality sleep supports:

- Learning and memory
- Mood and stress control
- Focus and decision-making
- Physical repair and energy
- Immune health
- Heart and metabolic wellness

Key idea: Sleep is a daily health need - not a luxury.

How Much Sleep Do Most People Need?

These are general ranges. Your needs may vary because of health conditions, pregnancy, medications, shift work, stress, or age-related changes.

Age Group	General Sleep Range
Children, 6-12 years	9-12 hours
Teens, 13-18 years	8-10 hours
Adults, 18-64 years	7-9 hours
Adults, 65+ years	7-8 hours

If you often wake up tired, feel sleepy during the day, or rely heavily on caffeine to function, your sleep habits may need attention.

Sleep vs. Rest

Sleep

A natural body-and-brain state that supports recovery, memory, and health.

Rest

A pause that lowers strain on your body or mind while you are awake.

Rest can include:

- Quiet breathing
- Stretching
- A calm walk
- Reading something relaxing
- Sitting without screens
- Taking a short work or study break

Rest helps you reset. Sleep helps you recover. You need both.

Use REST to build better sleep habits.
