- Sleep restores. Rest resets. Routines help both. - ? Full Edition
- Educational Disclaimer - ? Full Edition

Build Healthy Recovery Habits for Your Brain, Body, and Daily Life

A QRU Healthy Recovery Poster(TM)

Learning Goals

After reading this poster, you should be able to:

- Explain the difference between sleep and rest
 - Identify habits that support healthier sleep
 - Recognize signs that may require professional help
 - Use the QRU R.E.S.T. Check(TM) to improve your nightly routine
-

Sleep

Sleep is a natural body process where your brain and body cycle through stages of recovery.

During healthy sleep, your body works to:

- Repair muscles and tissues
- Support immune health
- Store memories and learning
- Balance mood and stress hormones
- Restore energy for the next day

General Sleep-Duration Guidance

Sleep needs vary by person, but common age-based recommendations include:

Age Group	Recommended Sleep
--- ---:	
Children ages 6-12	9-12 hours per 24 hours
Teens ages 13-18	8-10 hours per 24 hours
Adults ages 18-60	7 or more hours per night
Adults ages 61-64	7-9 hours per night
Adults ages 65+	7-8 hours per night

Note: Younger children usually need even more sleep, including naps. If you are unsure what is right for you or your child, ask a healthcare professional.

Rest

Rest is any activity that helps your body or mind slow down, recover, and reset.

Rest can happen while you are awake. Examples include:

- Sitting quietly
- Prayer, meditation, or deep breathing
- Gentle stretching
- Reading something calming
- Taking a short break from work, screens, or noise
- Spending peaceful time outdoors

Key Idea

You can rest without sleeping, but rest does not fully replace sleep.

Healthy sleep and rest can support:

- Better focus and memory
- Stronger emotional control

- Safer driving and decision-making
- Improved school and work performance
- Healthier blood pressure and metabolism
- Stronger immune system function
- Better relationships and communication

When sleep is poor, people may feel more:

- Irritable
- Forgetful
- Hungry
- Anxious
- Physically drained
- Less alert during school, work, or driving
