BACK MATTER

QRU Quick Check Answer Key

CHAPTER 1

Rest Can Pause the Drain, but Sleep Does the Repair

1.1 QRU Teacher Guide

CHAPTER 2

Grade Band / Reading Level

Recommended: Grades 7-10

Adaptable for: Grades 6-12 with differentiation

Student reading level target: Grades 7-8

CHAPTER 3

Lesson Duration

Core lesson: 45-60 minutes

Optional extension: One-week sleep-support plan and reflection

CHAPTER 4

Essential Question

Why do humans need sleep, and can rest replace it?

CHAPTER 5

Student-Friendly Big Idea

Sleep is a biologically essential process that helps the brain, immune system, heart, metabolism, emotions, and body recover. Quiet rest, relaxation, and naps can reduce strain and help us feel better, but they do not fully replace enough high-quality nighttime sleep.

CHAPTER 6

QRU Memory Sentence

Rest can pause the drain, but sleep does the repair.

1. Learning Objectives

By the end of the lesson, students will be able to:

1. Explain at least three ways sleep supports the body and brain, including learning, emotions, immune function, heart health, metabolism, or physical recovery.
2. Distinguish between quiet rest, relaxation, naps, and nighttime sleep.
3. Describe why rest can help but cannot fully replace regular, sufficient sleep.
4. Identify at least four habits or conditions that can support or interfere with healthy sleep.
5. Recognize that sleep problems can have medical, mental health,

environmental, family, or schedule-related causes and should not be treated as personal failure.

6. Create one realistic sleep-support strategy that could be used for one week.

2. Teacher Background

Sleep is not simply "doing nothing." It is an active biological process that supports brain function, memory, emotional regulation, immune function, metabolism, cardiovascular health, hormone regulation, and physical recovery.

According to guidance from the Centers for Disease Control and Prevention, National Institutes of Health / National Heart, Lung, and Blood Institute, and the American Academy of Sleep Medicine, sleep needs vary by age and individual. In general:

- Teens ages 13-18 need about 8-10 hours of sleep per 24 hours.
- Adults generally need 7 or more hours per night.
- Younger children usually need more sleep than teens.
- Individual needs can vary due to development, health, activity level, stress, medications, disability, sleep disorders, family responsibilities, work schedules, and environment.

Sleep is especially important for adolescents because their brains and bodies are still developing. Many teens also experience a natural shift toward feeling sleepy later at night, which can conflict with early school start times.

6.1 Credible Source References for Teachers

- Centers for Disease Control and Prevention. "How Much Sleep Do I Need?" and "Sleep and Sleep Disorders."

<https://www.cdc.gov/sleep/>

- National Institutes of Health / National Heart, Lung, and Blood Institute. "Sleep Deprivation and Deficiency."

<https://www.nhlbi.nih.gov/health/sleep-deprivation>

- American Academy of Sleep Medicine. "Recommended Amount of Sleep for Pediatric Populations" and sleep health guidance.

<https://aasm.org/>

3. Teacher Safety and Sensitivity

Note

Sleep habits can support healthier sleep, but they do not solve every sleep problem. Avoid framing sleep challenges as laziness, poor discipline, or student failure.

Sleep problems can involve:

- Medical conditions or sleep disorders
- Anxiety, depression, grief, trauma, or chronic stress
- Pain, medication, disability, or illness
- Family responsibilities or caregiving
- Work schedules or transportation needs
- Noise, light, crowding, safety concerns, or unstable housing
- School start times, homework load, technology access, or community conditions

6.2 Recommended Teacher Language

"Healthy sleep habits can help many people, but sleep problems are sometimes medical, emotional, environmental, family-related, or safety-related. If sleep problems are persistent or severe, it is not a personal failure. It is a reason to seek support from a trusted adult, school nurse, counselor, or healthcare professional."

Encourage students to seek support if they experience:

- Trouble falling asleep or staying asleep for several weeks
- Loud snoring, choking, gasping, or pauses in breathing during sleep
- Severe daytime sleepiness or falling asleep unintentionally
- Sleep problems connected to anxiety, depression, trauma, grief, or major stress
- Frequent nightmares, panic, or fear that interferes with sleep
- Sleep loss caused by pain, illness, medication, caregiving, work, housing instability, or safety concerns

4. Standards Alignment

Adapt as needed for your district, state, or national framework.

| Standard Area | Lesson Connection |

|---|---|

| Health Concepts | Students learn that sleep supports multiple body systems and is essential for health. |

| Analyzing Influences | Students examine how caffeine, screens, light, stress, exercise, naps, environment, and schedules affect sleep. |

| Accessing Valid Information | Students learn that credible sleep information comes from health organizations and professionals. |

| Decision-Making | Students evaluate sleep-supporting and sleep-disrupting choices. |

| Goal-Setting | Students create a realistic one-week sleep-support strategy. |

| Practicing Health Behaviors | Students choose a practical behavior that may support sleep quality. |

| Advocacy | Students explain why sleep is not wasted time and why rest cannot fully replace it. |

5. Key Vocabulary

Term	Student-Friendly Definition
---	---

Sleep	A natural body and brain state when awareness decreases and the body performs important repair, regulation, and memory processes.
-------	---

Rest	A period of reduced activity or reduced effort. Rest can help the body and mind recover from strain but is not the same as sleep.
------	---

Relaxation	A calming activity that lowers stress or tension, such as deep breathing, stretching, quiet music, prayer, meditation, or reading.
------------	--

Nap	A short sleep period, usually during the day. Naps can help with alertness but usually do not replace a full night of sleep.
-----	--

Circadian rhythm	The body's internal 24-hour clock that helps regulate sleepiness and alertness.
------------------	---

Sleep quality	How well someone sleeps, including how easily
---------------	---

they fall asleep, stay asleep, and feel rested afterward. |
Sleep deprivation	Not getting enough sleep for the body and brain's needs.
Sleep debt	The buildup of missed sleep over time.
Sleep hygiene	Habits and environmental choices that can support better sleep.
Insomnia	Ongoing difficulty falling asleep, staying asleep, or waking too early, even when there is a chance to sleep.
Sleep apnea	A sleep disorder in which breathing repeatedly stops or becomes very shallow during sleep.
Caffeine	A stimulant found in coffee, tea, energy drinks, some sodas, chocolate, and some medications that can make it harder to sleep.

6. Materials Needed

6.3 Teacher Materials

- Projector or board
- Timer
- Chart paper or digital slide for class organizer
- Copies of student handouts, or digital access
- Optional: sticky notes or index cards

6.4 Student Materials

- Pencil or device
- Student Handout A: Sleep, Rest, or Relaxation?
- Student Handout B: Sleep Support Scenario Cards

- Student Handout C: One-Week Sleep-Support Plan
- QRU Exit Ticket

7. Lesson At-a-Glance Timing

| Time | Lesson Segment | Purpose |

|---:|---|---|

| 0-5 min | Opening Quick Write | Activate prior knowledge |

| 5-10 min | QRU Big Idea Mini-Teach | Introduce sleep as biological repair |

| 10-20 min | Direct Instruction + Visual Organizer | Teach sleep functions and sleep needs |

| 20-30 min | Activity 1: Sleep, Rest, or Relaxation? | Clarify key distinctions |

| 30-42 min | Activity 2: Scenario Sort | Apply concepts to realistic situations |

| 42-50 min | QRU Practice/Application | Build a realistic sleep-support strategy |

| 50-57 min | QRU Quick Check | Assess understanding |

| 57-60 min | QRU Reflection / Exit Ticket | Close and reinforce memory sentence |

For a 45-minute class, shorten Activity 2 and assign the sleep-support plan as homework.

8. Lesson Preparation

Before teaching:

1. Review the Teacher Background and Safety Note.
 2. Prepare a visual organizer with four columns:
Nighttime Sleep | Nap | Quiet Rest | Relaxation
 3. Print or post student handouts.
 4. Decide whether students will complete the one-week plan in class or as homework.
 5. Prepare private response options for students who may not want to discuss personal sleep challenges publicly.
-

9. Step-by-Step Teaching Procedure

CHAPTER 7

Part 1: Opening Quick Write

Time: 5 minutes

Display the prompt:

"When someone says, 'I'll just rest instead of sleeping,' what do you think? Is rest the same as sleep? Why or why not?"

Students write silently for 2-3 minutes.

Then invite brief partner sharing.

7.1 Teacher Moves

- Accept a range of responses without correcting immediately.
- Listen for misconceptions such as:
- "Rest is basically the same as sleep."

- "Sleep is just for energy."
- "If you are tough, you can train yourself not to need much sleep."
- "Naps always make up for lost sleep."

Transition:

"Today we'll learn why rest can help, but sleep does something deeper. Our QRU memory sentence is: Rest can pause the drain, but sleep does the repair."

CHAPTER 8

Part 2: QRU Big Idea Mini-Teach

Time: 5 minutes

Say:

"Sleep is not wasted time. During sleep, the brain and body are active in important ways. Sleep helps with memory, attention, mood, immune function, growth and repair, heart health, metabolism, and safety. Rest and relaxation matter too, but they are not the same as full sleep."

Display:

QRU Memory Sentence: Rest can pause the drain, but sleep does the repair.

Ask students to repeat or paraphrase the sentence.

8.1 Discussion Prompt

- What does "pause the drain" mean?
- What does "does the repair" mean?

Guide students toward:

- Rest can reduce effort and stress.
- Sleep supports deeper biological processes.
- Both matter, but they are not interchangeable.

CHAPTER 9

Part 3: Direct Instruction + Visual Organizer

Time: 10 minutes

Create or display this organizer.

Type	What It Is	What It Can Do	What It Cannot Fully Do
Nighttime sleep	Main daily sleep period, usually lasting several hours	Supports memory, learning, emotional regulation, immune function, hormones, heart health, metabolism, and physical recovery	Cannot always be replaced by naps or quiet rest
Nap	Short sleep period during the day	Can improve alertness, mood, or performance for some people	May not replace enough nighttime sleep; long or late naps may interfere with nighttime sleep
Quiet rest	Reduced activity while awake	Can lower strain, conserve energy, and give the mind/body a break	Does not provide the full brain and body processes of sleep
Relaxation	Calming activity that reduces stress or tension	Can	

help the body prepare for sleep and reduce stress | Is not the same as being asleep |

9.1 Teach These Core Points

1. Sleep supports learning and memory.

During sleep, the brain helps organize and store information.

2. Sleep supports emotional regulation.

Insufficient sleep can make emotions feel stronger and harder to manage.

3. Sleep supports immune function.

Sleep helps the body defend itself and recover.

4. Sleep supports heart and metabolic health.

Long-term insufficient sleep is linked with higher risk of hypertension, diabetes, obesity, and cardiovascular disease.

5. Sleep supports safety.

Sleep loss can slow reaction time and increase the risk of injuries, driving accidents, and mistakes.

6. Sleep needs vary.

Teens generally need more sleep than adults. Most teens need about 8-10 hours per 24 hours, while most adults need 7 or more hours.

7. Sleep problems are not always caused by choices.

Medical, mental health, environmental, family, and schedule factors can affect sleep.

Part 4: Activity 1 - Sleep, Rest, or Relaxation?

Time: 10 minutes

Distribute or display Student Handout A.

Students classify each example as:

- N = Nighttime sleep
- P = Nap
- R = Quiet rest
- L = Relaxation

Some examples may fit more than one category; students should explain their reasoning.

10.1 Student Handout A: Sleep, Rest, or Relaxation?

Classify each example.

Example	N, P, R, or L?	Why?
---: --- --- ---		
1 Sleeping from 10:30 p.m. to 6:30 a.m.		
2 Lying on the couch awake after practice		
3 Taking a 20-minute sleep after school		
4 Doing slow breathing before bed		
5 Listening to calm music with eyes closed but staying awake		
6 Sleeping for three hours at night and trying to "make up for it" by sitting quietly in class		
7 Reading a calming book before bed		
8 Sleeping until noon after staying up most of the night		

10.2 Teacher Debrief

Ask:

- Which examples were easiest to classify?
- Which were tricky?
- Why is quiet rest helpful but not equal to sleep?
- How can relaxation support sleep without replacing it?

Emphasize:

"Relaxation can help prepare the body for sleep. Quiet rest can reduce strain. A nap can help with short-term alertness. But regular, sufficient nighttime sleep provides deeper and more complete recovery."

CHAPTER 11

Part 5: Activity 2 - Sleep Support Scenario Sort

Time: 12 minutes

Students work in pairs or small groups.

Distribute Student Handout B or read scenarios aloud.

For each scenario, students identify:

1. What might be affecting sleep?
2. Is this mainly a habit, environment, schedule, medical, mental health, family, or safety factor?
3. What is one supportive next step?
4. Is professional or trusted-adult support recommended?

11.1 Student Handout B: Sleep Support Scenario Cards

Scenario 1: Late Caffeine

Jordan drinks an energy drink at 7:00 p.m. to finish homework. Jordan feels wide awake at bedtime and struggles to fall asleep.

Scenario 2: Loud Snoring

Avery gets 9 hours in bed but feels exhausted most days. Avery's sibling says Avery snores loudly and sometimes seems to stop breathing.

Scenario 3: Caregiving

Mina helps care for a younger brother at night while a parent works. Mina often cannot go to bed until very late.

Scenario 4: Stress and Worry

Leo lies awake worrying about grades, family conflict, and sports pressure. Leo feels tired and irritable during the day.

Scenario 5: Phone at Bedtime

Sam scrolls on a phone in bed for an hour. Sam says, "I'm resting, so it's fine," but then has trouble sleeping.

Scenario 6: Unsafe or Noisy Environment

Tia shares a small room with several family members. Noise and light make it difficult to sleep.

11.2 Group Debrief

Use these prompts:

- Which scenarios could improve with sleep habits?

- Which scenarios need adult, medical, counseling, family, or school support?
- Why should we avoid blaming someone for sleep problems?
- What advice would be supportive instead of judgmental?

11.3 Key Teaching Point

"Sleep support is not just about personal discipline. Healthy habits matter, but so do health, stress, safety, family responsibilities, school schedules, and environment."

CHAPTER 12

Part 6: QRU Practice/Application - One-Week Sleep-Support Plan

Time: 8 minutes

Distribute Student Handout C.

Students choose one realistic strategy they could try for one week. They should not be required to disclose private sleep problems.

12.1 Student Handout C: One-Week Sleep-Support Plan

Name:

Week of:

12.2 Step 1: Choose One Goal

Check one:

- ☐ Keep a more consistent bedtime or wake time.

- ☐ Stop caffeine earlier in the day.
- ☐ Create a 10-minute wind-down routine.
- ☐ Charge my phone away from my bed.
- ☐ Reduce bright screens close to bedtime.
- ☐ Make my sleep space darker, quieter, or more comfortable if possible.
- ☐ Talk to a trusted adult about a sleep concern.
- ☐ Other:

12.3 Step 2: Make It Specific

My sleep-support strategy is:

I will try it on these days:

One obstacle might be:

One support or backup plan is:

12.4 Step 3: Reflect

At the end of the week, I will ask myself:

- Did I try my strategy?
- Was it realistic?
- Did it help my sleep, mood, focus, or energy?
- Do I need support from an adult or professional?

12.5 Teacher Note

Students should not be graded on whether their sleep improves. Grade only the thoughtfulness, realism, and completion of the plan.

10. QRU Quick Check

Time: 5-7 minutes

Use as a formative assessment during class or as a short quiz.

12.6 Questions

1. In one sentence, explain why sleep is more than just "resting."
 2. Name two body or brain functions that sleep supports.
 3. True or False: Quiet rest can reduce strain, but it does not fully replace enough sleep.
 4. Which group generally needs more sleep: teens or adults?
 5. Give one example of relaxation.
 6. Give one example of a sleep problem that may require help from a trusted adult or healthcare professional.
 7. Explain the QRU memory sentence: "Rest can pause the drain, but sleep does the repair."
-

11. QRU Exit Ticket

Time: 3 minutes

Students answer privately on paper or digitally.

1. One thing I learned today about sleep is:

2. One difference between sleep and rest is:
 3. One sleep-supporting strategy that might help someone is:
 4. If someone has serious or ongoing sleep problems, they should:
-

12. Assessment Plan

CHAPTER 13

Measurable Evidence of Understanding

Students demonstrate understanding if they can:

- Correctly explain that sleep performs biological functions beyond rest.
- Identify at least three benefits of sleep.
- Distinguish nighttime sleep from naps, quiet rest, and relaxation.
- State that teens generally need about 8-10 hours of sleep per 24 hours, while adults generally need 7 or more hours.
- Identify at least two situations where sleep problems may require adult, medical, counseling, or environmental support.
- Create a realistic, nonjudgmental sleep-support strategy.

CHAPTER 14

Suggested Scoring Rubric

| Criteria | 4 - Strong | 3 - Proficient | 2 - Developing | 1 - Needs

Support |

|---|---|---|---|---|

| Explains sleep importance | Explains multiple body/brain functions accurately | Explains at least three functions | Gives a partial or vague explanation | Shows major misunderstanding |

| Distinguishes sleep/rest | Clearly distinguishes sleep, rest, relaxation, and naps | Correctly distinguishes sleep from rest | Some confusion remains | Treats rest and sleep as the same |

| Applies concepts | Gives realistic strategies and support options | Gives at least one appropriate strategy | Strategy is vague or unrealistic | Cannot identify a useful strategy |

| Safety/sensitivity | Recognizes sleep problems are not personal failure | Identifies when help may be needed | Partially recognizes need for help | Blames individual or ignores support needs |

| QRU memory connection | Clearly explains the memory sentence | Mostly explains the memory sentence | Repeats but does not explain | Cannot connect sentence to lesson |

CHAPTER 15

Determining Whether Students Understood the Big Idea

Students have understood the big idea if their exit tickets or quick checks communicate:

Sleep is biologically necessary. Rest, relaxation, and naps can help, but they do not fully replace sufficient, high-quality sleep. Sleep challenges may require support and should not be treated as personal failure.

13. Answer Key

CHAPTER 16

Student Handout A: Sleep, Rest, or Relaxation?

	Example	Best Answer	Explanation
	---:--- --- ---		
1	Sleeping from 10:30 p.m. to 6:30 a.m.	N	This is a main nighttime sleep period.
2	Lying on the couch awake after practice	R	The person is awake but reducing activity.
3	Taking a 20-minute sleep after school	P	This is a short daytime sleep period.
4	Doing slow breathing before bed	L	This is a calming relaxation strategy.
5	Listening to calm music with eyes closed but staying awake	R or L	It is quiet rest and may also be relaxation.
6	Sleeping for three hours at night and trying to "make up for it" by sitting quietly in class	R, not replacement sleep	Sitting quietly may reduce strain but does not replace sufficient sleep.
7	Reading a calming book before bed	L or R	It can be relaxing and restful if the student is awake.
8	Sleeping until noon after staying up most of the night	N or recovery sleep	It is sleep, but an irregular schedule may not fully solve chronic sleep debt.

CHAPTER 17

Student Handout B: Scenario Sort

Suggested Answers

17.1 Scenario 1: Late Caffeine

- Affecting sleep: Caffeine close to bedtime.
- Category: Habit / substance influence / schedule.
- Supportive next step: Stop caffeine earlier; choose water or non-caffeinated drinks later in the day.
- Need support? Usually habit-based, but seek help if sleep trouble continues.

17.2 Scenario 2: Loud Snoring

- Affecting sleep: Possible breathing problem during sleep.
- Category: Medical / possible sleep disorder.
- Supportive next step: Tell a trusted adult; consider medical evaluation.
- Need support? Yes. Loud snoring with breathing pauses and daytime exhaustion should be checked.

17.3 Scenario 3: Caregiving

- Affecting sleep: Family responsibility and schedule.
- Category: Family / schedule / caregiving.
- Supportive next step: Talk with a trusted adult, counselor, or family member to explore support.
- Need support? Yes, if caregiving regularly prevents enough sleep.

17.4 Scenario 4: Stress and Worry

- Affecting sleep: Anxiety, stress, rumination.
- Category: Mental health / stress.
- Supportive next step: Try a wind-down routine; talk with a counselor, trusted adult, or healthcare professional if ongoing.
- Need support? Yes, especially if it persists or affects daily functioning.

17.5 Scenario 5: Phone at Bedtime

- Affecting sleep: Screen use, stimulation, light, delayed bedtime.
- Category: Habit / environment.
- Supportive next step: Set a phone boundary, use a charging spot away from bed, or create a screen-free wind-down routine.
- Need support? Possibly, if phone use is connected to anxiety, safety concerns, or compulsive behavior.

17.6 Scenario 6: Unsafe or Noisy Environment

- Affecting sleep: Noise, light, crowding, safety, housing conditions.
- Category: Environment / safety / housing.
- Supportive next step: Explore realistic supports such as earplugs, eye covering, a quieter sleep arrangement if possible, or help from a trusted adult or school support staff.
- Need support? Yes, especially if safety or housing instability is involved.

QRU Quick Check Answer Key

1. Sleep is more than resting because the brain and body perform important repair, memory, hormone, immune, and regulation processes during sleep.
 2. Accept any two: learning, memory, focus, emotional regulation, immune function, heart health, metabolism, growth, physical recovery, safety, reaction time.
 3. True.
 4. Teens generally need more sleep than adults.
 5. Accept examples: deep breathing, meditation, stretching, calm music, prayer, reading, mindfulness, progressive muscle relaxation.
 6. Accept examples: ongoing insomnia, loud snoring with gasping, breathing pauses, severe daytime sleepiness, nightmares related to trauma, sleep problems connected to anxiety/depression, sleep loss due to unsafe housing or caregiving.
 7. Rest can reduce strain or conserve energy, but sleep provides deeper biological recovery and regulation.
-

14. Discussion Prompts

Use during instruction, small groups, or reflection.

1. Why do some people treat sleep as less important than homework, sports, social media, or entertainment?
2. What are signs that someone may be sleep deprived?
3. How can poor sleep affect learning or emotional reactions at school?
4. Why might teens struggle to get enough sleep even when they know sleep is important?
5. What is the difference between giving helpful sleep advice and

blaming someone?

6. How can schools, families, and communities support healthier sleep?

7. When might a sleep problem need professional help?

8. What does the sentence "Rest can pause the drain, but sleep does the repair" help you remember?

15. Differentiation and Accessibility Supports

CHAPTER 18

Plain-Language Supports

- Use "body clock" before introducing "circadian rhythm."
- Use "not enough sleep" before introducing "sleep deprivation."
- Use "sleep habits" before introducing "sleep hygiene."
- Rephrase "metabolism" as "how the body uses energy."

CHAPTER 19

Visual Supports

- Use a four-column organizer: Sleep / Nap / Rest / Relaxation.
- Add icons:
- Moon = nighttime sleep
- Small clock = nap
- Pause button = quiet rest
- Breathing symbol = relaxation

- Use color coding for categories.
- Provide completed examples before independent work.

CHAPTER 20

Read-Aloud and Language Supports

- Read scenarios aloud.
- Allow students to respond orally, by drawing, or with sentence starters.
- Provide vocabulary cards with definitions.
- Pair multilingual learners with supportive peers.
- Allow translation tools when appropriate.

CHAPTER 21

Sentence Starters

- "Sleep is different from rest because?"
- "One thing sleep helps with is?"
- "A nap can help by?, but it may not?"
- "This sleep problem may need support because?"
- "A realistic sleep-support strategy could be?"

CHAPTER 22

Supports for Students with Sleep Disorders or Medical Conditions

- Do not require students to share personal sleep data.
- Allow private completion of sleep reflections.
- Grade planning and understanding, not actual sleep outcomes.

- Avoid suggesting that routines alone will fix medical sleep conditions.
- Encourage connection with school health staff or caregivers when appropriate.

CHAPTER 23

Supports for Students with Anxiety, Trauma, or Grief

- Avoid asking students to publicly describe nightmares, fear, or home situations.
- Offer opt-out or alternative scenarios.
- Emphasize safety and support.
- Use calm, nonjudgmental language.
- Provide counselor referral pathways if needed.

CHAPTER 24

Supports for Students with Caregiving Responsibilities, Work Schedules, or Unstable Housing

- Avoid assuming every student controls bedtime, noise, light, or sleep space.
- Offer strategies that include seeking support, adjusting routines where possible, and identifying safe adults.
- Validate that environment and responsibilities can affect sleep.
- Do not penalize students for sleep patterns beyond their control.

CHAPTER 25

Enrichment

- Have students compare CDC, NIH/NHLBI, and AASM sleep recommendations.
 - Ask students to design a school sleep awareness campaign.
 - Have students analyze how school start times, athletics, homework, jobs, and technology affect teen sleep.
-

16. Optional Extension: One-Week Sleep-Support Follow-Up

CHAPTER 26

Purpose

Students apply the lesson by testing one realistic sleep-support strategy for one week and reflecting on whether it was useful.

CHAPTER 27

Instructions

1. Students choose one strategy from Student Handout C.
2. Students track whether they attempted the strategy, not how many hours they slept unless they choose to privately.
3. After one week, students complete a reflection.

27.1 Follow-Up Reflection Questions

1. What strategy did you choose?
2. Was it realistic for your life? Why or why not?
3. Did anything make the strategy difficult?
4. Did you notice any change in mood, focus, energy, or stress?
5. Would you keep, change, or stop the strategy?
6. Is there any sleep concern that may require support from a trusted adult or professional?

27.2 Teacher Grading Guidance

Grade for:

- Completion
- Thoughtfulness
- Realistic planning
- Accurate use of lesson concepts

Do not grade students on:

- Number of hours slept
- Whether their sleep improved
- Personal or family circumstances
- Ability to control environment, work, caregiving, or housing conditions

17. Optional Extension Activity: Sleep Myth or Fact

Read each statement. Students decide whether it is a myth, fact, or "it depends."

| Statement | Best Answer | Teaching Note |

|---|---|---|

| "Rest is exactly the same as sleep." | Myth | Rest helps, but sleep provides deeper biological processes. |

| "Teens usually need more sleep than adults." | Fact | Teens generally need 8-10 hours; adults need 7 or more. |

| "A short nap can help some people feel more alert." | Fact | Naps can help, but timing and length matter. |

| "If someone cannot sleep, it is always because they made bad choices." | Myth | Sleep problems can have many causes. |

| "Caffeine late in the day can make sleep harder." | Fact | Caffeine is a stimulant. |

| "Relaxation before bed can support sleep." | Fact | Relaxation may help prepare the body for sleep. |

| "Everyone needs exactly the same amount of sleep." | Myth | Sleep needs vary by age and individual. |

| "Loud snoring with breathing pauses should be ignored." | Myth | It may need medical evaluation. |

18. Closure Script

Use the final 2-3 minutes.

Say:

"Today we learned that sleep is not wasted time. Sleep helps the brain and body repair, regulate, and prepare for the next day. Rest, relaxation, and naps can be helpful, but they are not the same as regular, sufficient sleep. We also learned that sleep problems are not personal failure. They can involve health, stress, family,

environment, schedules, or safety, and people deserve support."

Ask students to complete the sentence:

"Rest can pause the drain, but sleep?"

Students respond:

"?does the repair."

19. Teacher Implementation Notes

- Keep the lesson nonjudgmental. Many students do not fully control their sleep schedules.
 - Avoid asking students to publicly report bedtime, wake time, home environment, trauma, or family responsibilities.
 - Use "sleep-supporting choices" instead of "perfect sleep habits."
 - Reinforce that naps, rest, and relaxation can be valuable but are not complete replacements for sleep.
 - Encourage students to seek help for persistent or severe sleep concerns.
 - When possible, coordinate with school counselors, nurses, or health educators for student support.
-

CHAPTER 28

Understanding Sleep and Rest

28.1 QRU Big Idea

Sleep is biologically essential. It helps the brain, emotions, immune system, heart, metabolism, and body recover. Rest can help you feel calmer or less drained, but it cannot fully replace enough high-quality sleep.

28.2 QRU Memory Sentence

Rest can pause the drain, but sleep does the repair.

28.3 Sleep, Rest, Relaxation, and Naps

| Word | Meaning |

|---|---|

| Sleep | A body and brain state that supports repair, memory, regulation, and recovery. |

| Rest | A break from effort while awake. |

| Relaxation | A calming activity that lowers stress or tension. |

| Nap | A short sleep period during the day. |

28.4 Important Reminder

Teens generally need more sleep than adults. Many teens need about 8-10 hours of sleep per 24 hours. Adults generally need 7 or more hours.

28.5 Sleep-Supporting Strategies

- Keep bedtime and wake time as consistent as possible.
- Create a calming wind-down routine.
- Limit caffeine later in the day.

- Reduce bright screens close to bedtime.
- Make the sleep space darker, quieter, or more comfortable when possible.
- Use relaxation strategies such as breathing, stretching, or quiet reading.
- Talk to a trusted adult if sleep problems are ongoing, severe, or connected to stress, safety, health, or family responsibilities.

28.6 Remember

Sleep problems are not personal failure. If someone is struggling with sleep, they may need support.
