Day Trading with Faith

An Interactive Lesson on Risk, Health, Stewardship, and Accountability

Core Question: Can faith make day trading healthier or more successful?

Plain-Language Answer: Faith may help a person practice patience, honesty, self-control, community accountability, and wise stewardship. But faith does not make a trade safer, predict the market, or validate a financial decision. Day trading remains highly risky, and research shows that most individual day traders lose money after costs.

Important Disclaimer

This lesson is for education, reflection, and risk awareness only.

It does not recommend day trading. It does not tell you what to buy, sell, hold, or avoid. It does not provide personalized financial, legal, tax, medical, mental health, addiction recovery, or spiritual advice.

If you are making financial decisions, consult qualified professionals such as a licensed financial adviser, tax professional, attorney, mental health clinician, addiction specialist, or trusted faith/community leader as appropriate.

If trading is causing serious distress, secrecy, debt, conflict, sleep problems, panic, suicidal thoughts, or inability to stop, treat that as a serious warning sign and seek help immediately.

Emergency and Help Pathway

If you are in immediate danger or may harm yourself:

1. Stop trading now.
2. Move away from screens and trading apps.
3. Contact emergency help immediately.
 - In the U.S. and Canada, call or text 988 for the Suicide & Crisis Lifeline.
 - If there is immediate danger, call your local emergency number, such as 911 in the U.S. and Canada.
 - Outside the U.S. and Canada, contact your local emergency services or a crisis hotline in your country.

4. Tell one safe person: "I am not safe right now and I need help staying away from trading and harming myself."

If trading feels addictive, compulsive, secretive, or impossible to stop:

- Consider contacting a licensed mental health professional or addiction specialist.
- In the U.S., you may contact the National Problem Gambling Helpline: 1-800-GAMBLER or visit ncpgambling.org. Even when trading is not legally gambling, the behavior can become gambling-like for some people.
- Consider asking your brokerage about account restrictions, cooling-off periods, disabling margin/options access, or closing accounts.
- Consider speaking with a nonprofit credit counselor, bankruptcy attorney, or qualified financial professional if debt is involved.

QRU Safety Sentence:

If trading threatens your safety, relationships, housing, food, sleep, or will to live, the next right trade is no trade. Get help now.

Accessibility Notes

This lesson is designed for screen readers and plain-language learning:

- Headings are structured in order.
- Tables are simple and labeled.
- Interactive questions include answer keys.
- Key points are repeated in recap boxes.
- If you add visuals to this lesson, include alt text that explains the meaning, not just the appearance.
- Example: "Alt text: A person stepping away from a trading screen and calling an accountability partner."

Lesson Map

By the end of this lesson, you will be able to:

1. Explain why day trading is high-risk.
2. Distinguish between long-term investing and speculative trading.
3. Identify costs and risks, including spreads, commissions, taxes, margin, leverage, liquidity, volatility, and pattern day trader rules.
4. Explain why faith should not be used as market confirmation.

5. Recognize warning signs of unhealthy or compulsive trading behavior.
 6. Build a safety plan using limits, stop-loss rules, stop-trading rules, transparency, rest, and accountability.
 7. Know when to seek outside professional help.
-

Section Preview

This lesson has 10 parts:

1. The familiar story
 2. What day trading is
 3. Investing versus speculative trading
 4. Why day trading is risky
 5. What research says
 6. Faith, wisdom, and market uncertainty
 7. Warning signs
 8. Interactive scenarios
 9. Practical safety worksheets
 10. Final quiz and QRU takeaway
-

1. Start Here: The Familiar Story

Imagine someone begins day trading before work.

At first, it feels exciting. A few small wins create confidence. They think:

"Maybe I'm getting good at this."

Then losses come.

They start checking prices constantly. They trade more often to "make it back." They feel anxious when they are away from the screen. They pray for the next trade to work out. Eventually, they stop telling their spouse, family member, or trusted friend how much money they are risking.

The issue is no longer only financial.

It is affecting:

- Stress
- Sleep
- Honesty

- Relationships
- Work focus
- Spiritual peace
- Emotional stability
- Financial security

That is why this lesson matters.

QRU Translation(TM)

Day trading is not the same as patient investing. It involves frequent buying and selling in a risky market where costs, timing errors, leverage, taxes, emotional pressure, and sudden price movement can quickly reduce or erase returns.

Faith can help a person stay grounded in patience, honesty, stewardship, community accountability, and rest.

But faith should never be treated as a market-prediction tool.

Memory Sentence:

Faith can guide your values, but it cannot predict the market.

Reflection Question

Pause and answer honestly:

1. Have you ever felt pressure to "make back" money quickly?
2. Have you ever hidden financial choices because you felt embarrassed or afraid?
3. Have you ever interpreted a feeling, prayer, sign, or spiritual confidence as proof that a trade would work?

Write one sentence:

"One risk I need to take seriously is: ."

2. What Day Trading Is - Before the Jargon

Day trading means buying and selling financial assets quickly, often within the same day, in an attempt to profit from short-term price changes.

A person might day trade:

- Stocks
- Options
- Futures
- Foreign currencies
- Cryptocurrency
- Leveraged exchange-traded funds
- Other speculative assets

Day trading can feel like trying to make quick decisions in a fast-moving storm.

Prices move quickly. Emotions rise quickly. Mistakes can happen quickly.

A trader may feel:

- Excited after wins
- Anxious after losses
- Pressured to keep watching
- Tempted to risk more to recover money
- Embarrassed to tell others what is happening
- Spiritually confused if they prayed and still lost money

The danger is not only that money can be lost. The danger is that the activity can begin to reshape a person's habits, emotions, relationships, and sense of peace.

Key Vocabulary

| Term | Plain-Language Meaning |

|---|---|

| Day trading | Frequent buying and selling of financial assets, often within the same day, to try to profit from short-term price movement. |

| Speculation | Taking financial risk based on uncertain future price movement. |

| Investing | Buying assets with a longer-term plan based on goals, diversification, time horizon, and risk tolerance. |

| Behavioral addiction | A pattern of behavior that feels hard to control and continues despite harm or distress. |

| Loss-chasing | Risking more money to try to recover previous losses. |

| Margin | Borrowed money from a broker used to buy or trade financial assets. |

| Leverage | Using borrowed money or financial instruments to control a larger position than your cash alone would allow. |

Liquidity	How easily an asset can be bought or sold without greatly affecting its price.
Volatility	How much and how quickly prices move up and down.
Spread	The difference between the price buyers are willing to pay and sellers are asking. It is a hidden trading cost.

Check Your Understanding 1

Which statement is most accurate?

- A. Day trading is safe if a person has strong faith.
- B. Day trading is high-risk, and faith does not guarantee better market prediction.
- C. Day trading becomes low-risk if someone prays before each trade.
- D. Day trading is the same as long-term patient investing.

<details

<summary<strongShow Answer</strong</summary

Correct answer: B.

Day trading remains high-risk. Faith may support healthier coping, values, and accountability, but it does not reliably improve market prediction or trading performance.

</details

3. Investing Versus Speculative Trading

Day trading is often confused with investing, but they are not the same.

Comparison Table

Long-Term Investing	Speculative Day Trading
---------------------	-------------------------

---	---
-----	-----

Usually based on long-term goals	Usually based on short-term price movement
----------------------------------	--

Often uses diversification	Often concentrates risk in fast trades
----------------------------	--

Can be aligned with retirement, savings, or wealth-building plans	Often focused on quick profit
---	-------------------------------

Less frequent buying and selling	Frequent buying and selling
----------------------------------	-----------------------------

Lower emotional intensity for many people	High emotional intensity for many people
---	--

Time horizon may be years or decades	Time horizon may be minutes, hours, or days
--------------------------------------	---

Still involves risk	Usually involves much higher behavioral and timing risk
---------------------	---

Investing can still lose money. But day trading adds extra challenges:

- More decisions
- More timing pressure
- More temptation to chase losses
- More transaction costs
- More tax complexity
- More exposure to leverage
- More emotional strain

Memory Sentence:

Investing asks, "Does this fit my long-term plan?" Speculation asks, "Can I guess the next move?"

Reflection Question

Which question are you more likely to ask?

A. "Does this choice fit my long-term plan and risk capacity?"

B. "Can I make money from the next price move?"

If your answer is B, pause and write:

"What could go wrong if I am wrong?"

4. Why Day Trading Is So Risky

Day trading is risky for many reasons. Some are obvious. Others are hidden.

4.1 Price Movement Is Uncertain

Short-term prices can move because of:

- News
- Rumors
- Earnings reports
- Interest rate changes
- Large institutional trades
- Economic data

- Social media attention
- Market-maker activity
- Geopolitical events
- Sudden fear or excitement

A retail trader usually does not have the same speed, tools, research access, or execution power as professional firms.

Even if a person is intelligent, disciplined, and sincere, the market can still move against them.

4.2 Costs Can Quietly Reduce Returns

Even when an app says "commission-free," trading may still have costs.

Common costs include:

| Cost | What It Means |

|---|---|

| Commissions | Direct fees charged for trades. Many stock trades may be commission-free, but not all products are. Options, futures, and international trades may have fees. |

| Spreads | The gap between buying and selling prices. Frequent trading means repeatedly crossing that gap. |

| Payment for order flow and execution quality | Some brokers route orders in ways that may affect execution quality. |

| Slippage | The price you expect may not be the price you receive, especially in fast or illiquid markets. |

| Platform/data fees | Some tools, data feeds, or premium services cost money. |

| Borrowing costs | Margin loans and short selling can involve interest or fees. |

Small costs can become large when repeated many times.

QRU Recap Box:

A trader does not only need to be "right." A trader must be right enough to overcome spreads, slippage, fees, taxes, and mistakes.

4.3 Taxes Can Be Complicated

Frequent trading can create tax consequences.

Depending on your country and situation, tax issues may include:

- Short-term capital gains taxed differently than long-term gains
- Loss deduction limits
- Wash sale rules
- Complex reporting
- Tax treatment of options, futures, crypto, or foreign assets
- Estimated tax payments
- Recordkeeping burdens

In the United States, short-term capital gains are generally taxed as ordinary income, while long-term capital gains may receive different treatment. Wash sale rules can disallow or defer certain losses when substantially identical securities are repurchased within a specified period.

Tax laws vary by location and change over time. Consult a qualified tax professional.

4.4 Margin and Leverage Can Magnify Losses

Margin means borrowing money from a broker. Leverage means controlling a larger position than your cash alone would allow.

Leverage can magnify gains, but it can also magnify losses.

A leveraged trade can lose more quickly than an unleveraged trade. In some products, a person can lose more than the original amount invested. Margin calls can force selling at bad times.

Examples of leveraged or high-risk products include:

- Options
- Futures
- Forex
- Margin stock trading
- Leveraged ETFs
- Certain cryptocurrency derivatives

Memory Sentence:

Leverage does not make you smarter; it makes the outcome bigger.

4.5 Liquidity Risk Can Trap You

Liquidity means how easily something can be bought or sold.

If an asset is illiquid:

- You may not be able to sell quickly.
- You may have to accept a worse price.
- The spread may be wide.
- Price movement may be extreme.

This can be especially important in:

- Thinly traded stocks
 - Some options contracts
 - Small cryptocurrencies
 - After-hours markets
 - Panic conditions
-

4.6 Volatility Can Overwhelm Judgment

Volatility means prices move up and down sharply.

Volatility can create opportunity, but it also creates danger:

- Stop-loss orders may trigger quickly.
- Prices may gap past your stop.
- Emotional decisions become more likely.
- A trader may increase size to recover losses.
- A winning trade can turn into a losing trade suddenly.

Volatility is not proof of opportunity. It is proof of movement.

4.7 Pattern Day Trader Rules May Apply

In the United States, FINRA pattern day trader rules may apply to certain margin accounts.

A person may be considered a pattern day trader if they execute four or more day trades within five business days in a margin account, and those trades represent more than 6% of total trades in that period. Pattern day traders are generally required to maintain at least \$25,000 in equity in the margin account before day trading.

Rules may vary by account type, product, broker, and jurisdiction. Always verify current rules with the broker and applicable regulator.

Important: Having enough money to meet a rule does not mean day trading is wise or safe.

Check Your Understanding 2

Which item is a real trading cost even when a platform advertises "commission-free" trading?

- A. Spread
- B. Slippage
- C. Borrowing costs on margin
- D. All of the above

<details

<summaryShow Answer</summary>

Correct answer: D.

"Commission-free" does not mean "cost-free." Spreads, slippage, borrowing costs, taxes, data fees, and execution quality can still affect results.

</details>

5. What Research Says About Day Trading Outcomes

Research on individual active trading and day trading is sobering.

Multiple studies have found that frequent individual traders tend to underperform, and that most day traders do not earn sustained profits after costs.

A widely cited study by Barber and Odean found that individual investors who traded more frequently earned lower net returns, and that trading was "hazardous" to wealth. Research by Barber, Lee, Liu, and Odean on Taiwanese day traders found that most day traders lost money after transaction costs, while only a small minority showed persistent profitability. A study of Brazilian day traders by Chague, De-Losso, and Giovannetti found that the vast majority lost money and that only a very small percentage earned more than a modest daily wage over time.

The lesson is not that profit is impossible. The lesson is that sustained profitability is uncommon, difficult, and not guaranteed by intelligence, confidence, effort, or faith.

Source Note for Key Claims

Key claims in this lesson are informed by:

- Barber, B. M., & Odean, T. (2000). "Trading Is Hazardous to Your Wealth: The Common Stock Investment Performance of Individual Investors." *Journal of Finance*.

- Barber, B. M., Lee, Y.-T., Liu, Y.-J., & Odean, T. (2014). "The Cross-Section of Speculator Skill: Evidence from Day Trading." *Journal of Financial Markets*.
- Chague, F., De-Losso, R., & Giovannetti, B. (2020). "Day Trading for a Living?" *Brazilian Review of Finance* / related published research on Brazilian day traders.
- U.S. Securities and Exchange Commission investor education materials on day trading, margin, and online trading.
- FINRA investor education materials on pattern day trading, margin accounts, and trading risks.
- IRS investor tax resources, including capital gains and wash sale guidance.

Regulations and tax rules vary by country and can change. Always verify current rules with official sources and qualified professionals.

QRU Recap Box

Most people who trade actively do not simply compete against "the market." They compete against:

- Professional firms
- Faster technology
- Better information systems
- Costs
- Taxes
- Their own emotions
- Randomness
- Overconfidence

Memory Sentence:

A winning day is not proof of a winning system.

6. Faith, Wisdom, and Market Uncertainty

Faith can be a meaningful part of a person's life. It can shape values, priorities, generosity, patience, honesty, rest, humility, and accountability.

But faith should not be used as evidence that a trade will succeed.

Faith Can Support Healthy Decisions By Encouraging:

- Honesty about risk
- Patience instead of urgency
- Stewardship instead of recklessness
- Contentment instead of greed
- Community instead of secrecy
- Rest instead of obsession
- Humility instead of overconfidence
- Care for family obligations
- Compassion toward oneself after mistakes

Faith Should Not Be Used To:

- Justify a risky trade
- Ignore evidence
- Override a budget
- Avoid professional advice
- Claim certainty about market direction
- Interpret a win as spiritual approval
- Interpret a loss as spiritual failure
- Pressure others into financial risk
- Hide trading from family or accountability partners

Prayer, meditation, discernment, or spiritual confidence may help a person slow down and reflect. They do not turn uncertainty into certainty.

QRU Faith-Sensitive Sentence:

Spiritual peace is not the same as financial confirmation.

Reflection Question

Complete the sentence:

"If my faith is guiding my character rather than predicting the market, I will become more honest about ."

Check Your Understanding 3

Which statement best reflects a healthy faith-informed approach?

- A. "I feel peaceful, so this trade must be safe."
- B. "I prayed, so the market should move in my favor."
- C. "My faith calls me to honesty, humility, limits, and accountability, even when I feel tempted to trade."
- D. "Losses mean I did not believe strongly enough."

<details

<summaryShow Answer</summary

Correct answer: C.

A healthy faith-informed approach supports character and wisdom. It does not claim spiritual certainty about market outcomes.

</details

7. Warning Signs of Unhealthy Trading

Day trading can become harmful when it starts controlling attention, emotions, money, relationships, or identity.

Watch for These Warning Signs

| Warning Sign | What It May Sound Like |

|---|---|

| Loss-chasing | "I just need one big win to get back." |

| Secrecy | "I can't tell them how much I lost." |

| Borrowing to trade | "I'll use the credit card just this once." |

| Trading money needed for bills | "Rent is due, but I can double this first." |

| Inability to stop | "I said I was done, but I opened the app again." |

| Sleep disruption | "I keep checking overnight markets." |

| Relationship conflict | "Everyone is overreacting. They don't understand." |

| Spiritual distress | "Maybe I failed spiritually because the trade lost." |

| Emotional swings | "My whole day depends on whether I'm up or down." |

| Increasing risk | "Small trades won't fix this. I need to size up." |

| Using margin impulsively | "Borrowing will help me recover faster." |

| Suicidal thoughts | "My family would be better off without me." |

If several signs are present, do not treat this as a minor discipline problem. Treat it as a serious health and safety concern.

Red Flag Rule

If any of the following are true, pause trading and seek help:

- You are hiding losses.
- You are using debt to trade.
- You are trading money needed for basic needs.
- You cannot follow your own stop rules.
- You feel unable to stop.
- You feel panic, despair, or suicidal thoughts.
- Your relationships are being harmed.
- You are lying to keep trading.
- You are sleeping poorly because of markets.
- You are using prayer or spiritual certainty to override risk limits.

Memory Sentence:

Secrecy is a stop sign.

Check Your Understanding 4

Which behavior is the clearest sign to stop and seek support?

- A. Reviewing a long-term retirement account once a quarter
- B. Feeling disappointed after a small planned loss
- C. Hiding trading losses from a spouse, partner, family member, or accountability person
- D. Reading an educational article about risk

<details

<summary<strongShow Answer</strong</summary

Correct answer: C.

Hiding losses is a major warning sign. Secrecy often means trading is moving from a financial activity into a relational, emotional, and safety issue.

</details

8. Interactive Scenarios

Read each scenario and choose the wisest next step.

Scenario 1: The "Make It Back" Trade

Jordan loses \$800 in the morning. Jordan feels ashamed and thinks, "If I double my position, I can make it back before lunch."

What should Jordan do?

- A. Increase the position size because confidence matters.
- B. Pray for courage and place the trade.
- C. Stop trading for the day, record the loss honestly, and contact an accountability person.
- D. Keep trading but avoid looking at the account balance.

<details

<summary<strongShow Answer</strong</summary

Best answer: C.

Loss-chasing is dangerous. A planned stop-trading rule protects the person from emotional escalation.

</details

Scenario 2: The Spiritual Confirmation Trap

Avery feels calm after prayer and concludes, "This peace means the trade will succeed."

What is the healthiest interpretation?

- A. Peace guarantees profit.
- B. Prayer can replace research and risk limits.
- C. Spiritual peace may help Avery slow down, but it does not predict the market.
- D. If the trade loses, Avery failed spiritually.

<details

<summary<strongShow Answer</strong</summary

Best answer: C.

Faith can support reflection and character. It should not be used as market confirmation.

</details

Scenario 3: The Secret Account

Morgan has a trading account that their spouse does not know about. Morgan has lost money and plans to "fix it" before saying anything.

What is the wisest next step?

- A. Keep trading until the balance recovers.
- B. Open a second account.
- C. Stop trading and disclose the account to a trusted person using a calm accountability script.
- D. Borrow money privately to recover faster.

<details

<summary<strongShow Answer</strong</summary

Best answer: C.

Secrecy is a warning sign. The first repair step is transparency and stopping further harm.

</details

Scenario 4: Margin Temptation

Sam has \$5,000 but uses margin to take a much larger position. The trade moves against Sam quickly.

What is the key risk?

- A. Margin can magnify losses and may lead to forced selling or a margin call.
- B. Margin removes risk.
- C. Margin guarantees professional-level returns.
- D. Margin protects against volatility.

<details

<summary<strongShow Answer</strong</summary

Best answer: A.

Margin and leverage magnify outcomes. They can increase losses and create urgent financial pressure.

</details

9. Practical Safety Worksheets

These templates are for reflection and harm reduction. They are not financial advice. If you are in serious financial distress, speak with qualified professionals.

Worksheet 1: Trading-Risk Budget

Before any speculative trading, basic needs and obligations should be protected.

Step 1: Protect Non-Negotiables

Write the monthly amount needed for each category.

Category	Monthly Amount	Protected? Yes/No
---	---	---
Housing	\$	
Food	\$	
Utilities	\$	
Transportation	\$	
Insurance/medical needs	\$	
Debt minimums	\$	
Child/family obligations	\$	
Emergency savings	\$	
Taxes	\$	
Giving/faith/community commitments, if applicable	\$	

Step 2: Identify Money That Must Never Be Traded

Check all that apply:

- ☐ Rent or mortgage money
- ☐ Food money
- ☐ Utility money
- ☐ Tuition money
- ☐ Medical money
- ☐ Emergency savings
- ☐ Borrowed money
- ☐ Credit card funds
- ☐ Tax money
- ☐ Retirement funds needed for long-term security
- ☐ Money promised to another person
- ☐ Money hidden from a spouse, partner, family member, or accountability person

Step 3: Set a Speculation Limit

Complete this sentence:

"If I choose to speculate at all, the maximum amount I can lose without harming my obligations is \$."

Now complete:

"If that amount goes to zero, I will not add more money for at least days."

Step 4: Reality Check

If losing the amount would create panic, debt, secrecy, missed bills, or relationship conflict, the amount is too high.

QRU Safety Sentence:

Money needed for life is not trading capital.

Worksheet 2: Stop-Loss and Stop-Trading Rules

A stop-loss rule limits loss on a trade. A stop-trading rule stops the person from continuing when judgment may be impaired.

My Stop-Loss Rules

| Rule | My Limit |

|---|---|

| Maximum loss per trade | \$ or % |

| Maximum position size | \$ or % |

| No margin/leverage rule | Yes / No |

| Products I will not trade | |

| Time limit for open trades | |

| Rule if price gaps past stop | |

My Stop-Trading Rules

I will stop trading for the day if:

- ☐ I lose \$ in one day.
- ☐ I lose trades in a row.
- ☐ I feel panic, revenge, desperation, or euphoria.
- ☐ I want to hide a trade.
- ☐ I want to borrow money to trade.
- ☐ I want to increase size to recover losses.
- ☐ I sleep less than hours.
- ☐ I violate any rule in this plan.
- ☐ Someone I trust asks me to pause.

My Cooling-Off Rule

If I break a rule, I will:

1. Stop trading immediately.
2. Log out of the trading platform.
3. Tell within minutes.
4. Wait days before making any new trade.
5. Review whether I need professional help.

Memory Sentence:

A rule you can ignore is not a safety plan; it is a suggestion.

Worksheet 3: Accountability Script

Use this script with a spouse, partner, trusted friend, mentor, counselor, or faith/community leader.

Short Script

"I need to tell you something honestly. I have been trading, and it has become stressful. I may be tempted to hide losses or keep going to recover money. I am choosing transparency. Will you help me pause, review the numbers, and decide what support I need?"

If You Have Hidden Losses

"I have not been fully honest about trading losses. I am sorry. I do not want to keep hiding. I need help stopping further harm, reviewing the debt or account balance, and making a plan with qualified support."

If You Feel Unable to Stop

"I feel unable to stop trading even though it is hurting me. I need help today. Please stay with me while I remove access, contact support, and make a safety plan."

Accountability Partner Checklist

Ask your accountability person to help you:

- ☐ Review account balances.
- ☐ Review debts.
- ☐ Remove trading apps from your phone.
- ☐ Disable margin, options, or risky permissions.
- ☐ Contact the broker about restrictions.
- ☐ Contact a financial professional.
- ☐ Contact a therapist or addiction specialist.

- ☐ Create a no-trading period.
 - ☐ Protect bill money.
 - ☐ Make a debt repayment plan.
 - ☐ Check in daily or weekly.
-

Worksheet 4: Disclosure Checklist

Use this checklist when financial secrecy has occurred.

Information to Gather

- ☐ Brokerage account names
- ☐ Account balances
- ☐ Current open positions
- ☐ Margin balances
- ☐ Loans or credit card debt used for trading
- ☐ Tax documents
- ☐ Recent deposits and withdrawals
- ☐ Trading subscriptions or paid groups
- ☐ Crypto wallets or exchange accounts
- ☐ Options/futures/forex accounts
- ☐ Any accounts unknown to spouse, partner, family, or accountability person

Conversation Boundaries

Before disclosure, write:

"My goal is not to defend every decision. My goal is honesty and repair."

During disclosure:

- Tell the truth plainly.
- Avoid blaming the market, family, faith, or stress.
- Do not promise quick recovery through more trading.
- Ask for help creating safety barriers.
- Be willing to involve professionals.

After disclosure:

- ☐ Freeze or pause trading.
- ☐ Protect basic needs.
- ☐ Schedule professional help if needed.
- ☐ Create a written repair plan.

- ☐ Agree on transparency rules.
-

Worksheet 5: Rest Plan

Rest is not laziness. Rest protects judgment.

My Market Rest Plan

I will create screen-free time during:

- ☐ First 30 minutes after waking
- ☐ Meals
- ☐ Work hours
- ☐ Family time
- ☐ Prayer/meditation/reflection time
- ☐ One full day per week
- ☐ One full week per quarter
- ☐ Bedtime routine

My Replacement Activities

When I feel the urge to check prices, I will:

- ☐ Walk for 10 minutes.
- ☐ Call or text my accountability person.
- ☐ Pray, meditate, or breathe without making a trade.
- ☐ Read something unrelated to markets.
- ☐ Exercise.
- ☐ Cook or eat a meal.
- ☐ Journal the urge without acting on it.
- ☐ Review my safety plan.
- ☐ Do a household task.
- ☐ Spend time with family or community.

My Rest Sentence

Complete:

"When I rest from trading, I am protecting ."

QRU Recap Box:

Rest interrupts urgency. Urgency is where many harmful trades begin.

Worksheet 6: Professional Help Decision Tree

Use this decision tree to decide what kind of support may be needed.

Start Here

Question 1: Are you in immediate danger, suicidal, or afraid you may harm yourself?

- Yes: Stop trading. Call emergency services or a crisis line now. Tell a safe person immediately.
- No: Continue.

Question 2: Are you unable to stop trading even after serious losses or broken promises?

- Yes: Contact a mental health professional, addiction specialist, or problem gambling support service. Ask a trusted person to help remove access.
- No: Continue.

Question 3: Are you hiding accounts, losses, or debt?

- Yes: Use the accountability script and disclosure checklist. Consider involving a counselor, financial professional, or mediator.
- No: Continue.

Question 4: Are you using credit cards, loans, margin, or bill money to trade?

- Yes: Stop trading. Contact a nonprofit credit counselor, financial professional, or attorney if debt is severe.
- No: Continue.

Question 5: Are taxes, wash sales, options, futures, crypto, or business/trader status questions involved?

- Yes: Contact a qualified tax professional.
- No: Continue.

Question 6: Do you need a long-term financial plan?

- Yes: Consider a qualified financial planner or fiduciary adviser.
- No: Continue monitoring risk and accountability.

Question 7: Are you spiritually distressed, ashamed, or confused?

- Yes: Consider speaking with a trusted faith/community leader who respects financial reality and does not pressure you to keep trading.
- No: Continue with rest, transparency, and safety limits.

10. Personal Safety Plan Fill-In

Complete this before considering any speculative trading.

My Non-Negotiable Rules

1. I will never trade money needed for: .
2. I will never borrow money to trade from: .
3. I will never hide accounts or losses from: .
4. I will stop trading immediately if: .
5. I will seek professional help if: .

My Accountability Person

Name:

Phone/email:

When I will contact them:

My No-Trade Triggers

I will not trade when I am:

- ☐ Angry
- ☐ Afraid
- ☐ Exhausted
- ☐ Euphoric
- ☐ Desperate
- ☐ Spiritually pressured
- ☐ Hiding information
- ☐ Under the influence of alcohol or substances
- ☐ In conflict with someone
- ☐ Trying to recover losses quickly

My Emergency Plan

If I feel out of control, panicked, or unsafe, I will:

1. Stop trading.
2. Log out.

3. Put my device away.
4. Contact .
5. Call crisis support or emergency services if I might harm myself.
6. Wait at least hours before making any financial decision.

Memory Sentence:

No trade is worth your life, your family, your integrity, or your peace.

11. Knowledge Check: True or False

Answer each statement.

1. Faith can guarantee better day trading results.
2. Spreads and slippage can be trading costs even without commissions.
3. Leverage can magnify both gains and losses.
4. Hiding losses is a warning sign.
5. A profitable trade proves the strategy is safe.
6. Long-term investing and day trading are the same.
7. Taxes can make frequent trading more complicated.
8. If trading causes suicidal thoughts, the correct next step is to stop trading and seek emergency help.

<details

<summary<strongShow Answers</strong</summary

1. False. Faith does not predict the market.
2. True. These costs can reduce returns.
3. True. Leverage increases the size of outcomes.

<details

<summary<strongAnswer</strong</summary

Correct answer: C.

</details

Question 7

In the U.S., pattern day trader rules may require a certain minimum equity level in some margin accounts. What is the broader lesson?

- A. Meeting the minimum means day trading is safe.
- B. Rules, broker requirements, and account type matter, but compliance does not remove risk.
- C. Pattern day trader rules apply exactly the same in every country.
- D. Pattern day trader rules eliminate losses.

<details

<summary<strongAnswer</strong</summary

Correct answer: B.

</details

Question 8

Which sentence is the strongest safety principle?

- A. "I can always win it back."
- B. "I should keep losses secret until I recover."
- C. "No trade is worth my life, family, integrity, or peace."
- D. "If I feel confident, I do not need limits."

<details

<summary<strongAnswer</strong</summary

Correct answer: C.

</details

13. Final Reflection

Answer these three questions:

1. What is one belief about trading that I need to challenge?
2. What is one boundary I need to set before any financial risk?
3. Who is one person I can be honest with about money?

Write your final commitment:

"For the sake of wisdom, health, honesty, and stewardship, I will ."

QRU Final Recap

What You Learned

- Day trading is speculative and high-risk.
 - Most active day traders do not achieve sustained profits after costs.
 - "Commission-free" does not mean cost-free.
 - Spreads, slippage, taxes, margin, leverage, liquidity, and volatility matter.
 - Pattern day trader rules and broker requirements may apply, especially in U.S. margin accounts.
 - Long-term investing and speculative day trading are not the same.
 - Faith can support patience, humility, honesty, accountability, and rest.
 - Faith should not be used as proof that a trade will succeed.
 - Secrecy, loss-chasing, debt, and inability to stop are major warning signs.
 - If trading creates crisis, safety comes first. Stop trading and get help.
-

QRU Takeaway

Faith can shape your character, but it cannot control the market.

Wisdom sets limits before emotion takes over.

Stewardship protects what matters most.

Secrecy is a stop sign.

No trade is worth your life, your family, your integrity, or your peace.

If you remember only one sentence, remember this:

The next faithful step may not be a better trade. It may be stopping, telling the truth, resting, and

getting help.
