AI Literacy - Video Script

CHAPTER 1

Video Script

Scene 1: Opening visual of AI tools appearing in a classroom, office, clinic, news feed, and public service setting.

Narrator: AI is becoming part of many areas of life: education, work, healthcare, media, and public services.

Scene 2: Learner looking at a screen with the words AI Literacy.

Narrator: AI literacy means understanding, evaluating, using, and participating in decisions about artificial intelligence systems.

Scene 3: Icons appear: data, algorithms, machine learning, generative AI, uncertainty.

Narrator: It includes basic concepts like data, algorithms, machine learning, generative AI, and uncertainty.

Scene 4: AI output appears beside a human checklist.

Narrator: It also means knowing that automated output is not the same as human judgment. AI can be useful, but it still needs careful review.

Scene 5: Checklist on screen.

On-screen text: Accuracy. Bias. Privacy. Security. Transparency. Accountability. Human oversight.

Narrator: Responsible AI use means asking important questions. Is it accurate? Could it be biased? Are there privacy or security risks? Who is accountable? Is human oversight needed?

Scene 6: Group discussion around an AI decision map.

Narrator: AI literacy helps people participate in decisions about technologies that affect communities.

Scene 7: Learners practicing with an AI tool and comparing outputs.

Narrator: The most useful AI literacy education combines hands-on practice, critical evaluation, technical understanding, and ethical reasoning.

Scene 8: Closing visual of human and AI icons connected by a bridge labeled Thoughtful Use.

Narrator: AI literacy is not just for computer scientists. It is a civic and workforce skill. The goal is not to fear AI or blindly trust it. The goal is to understand it well enough to use it wisely.

CHAPTER 2

Story

Maya was asked to use an AI tool to help plan a community event. At first, she treated the tool like a magic answer machine. It made a schedule, wrote messages, and suggested a budget. But Maya noticed something important: some details were wrong, some suggestions did not fit her community, and the tool did not explain where its information came from. So she paused and used AI literacy. She asked: What data might this tool be using? What can it do well? Where might it be uncertain? Could its answer be biased? Is anyone's private information at risk? Who is responsible for the final decision? Maya still used the AI, but she checked facts, protected personal data, asked people for feedback, and made the final choices herself. That is AI literacy: not fearing AI, not blindly trusting it, but understanding, evaluating, and using it

thoughtfully with human judgment.

CHAPTER 3

Call to Action

The next time you use an AI tool, pause before accepting its answer: check one fact, look for one possible bias or limitation, and decide what human judgment is still needed.
