Why hydration matters (UI test) - Presentation

Manufactured by QRU Factory(TM). QRU simplifies the path to understanding the truth.

Why hydration matters (UI test) - Presentation

Vocabulary

- Hydration - Having enough fluid in the body to support normal functions like circulation, temperature control, digestion, kidney filtering, and cell activity.
- Dehydration - A state where the body does not have enough fluid, which can cause fatigue, reduced performance, and poorer attention, mood, or thinking.
- Electrolyte imbalance - An unsafe disruption in minerals such as sodium that help control fluid balance, which can rarely happen from excessive fluid intake.
- Cellular metabolism - The chemical work cells do to use energy and keep the body functioning.
