CHAPTERS

Chapter 1

Understanding Sleep and Rest

1.1 Why do humans need sleep, and can rest replace it?

1.2 Educational Use Note

Chapter 2

Learning Goals

Chapter 3

Big Idea

Chapter 4

Workbook Roadmap

Chapter 5

A. Quick Reflection

5.1 1. When you do not get enough sleep, what changes do you notice in yourself?

5.2 2. What is one way rest might help a tired person during the day?

5.3 3. Do you think resting quietly can fully replace sleep? Why or why not?

Chapter 6

B. Everyday Analogy

6.1 In your own words, explain what this analogy means.

Chapter 7

C. Before You Learn

7.1 1. Sleep is mostly the same as rest.

7.2 2. A person can be lying down quietly and still not receive the full benefits of sleep.

7.3 3. Chronic insufficient sleep can affect the brain, mood, heart, metabolism, immune system, and safety.

Chapter 8

A. What Is Sleep?

Chapter 9

B. What Is Rest?

Chapter 10

C. Why Rest Cannot Fully Replace Sleep

Chapter 11

A. Vocabulary Matching

11.1 Write your answers:

Chapter 12

B. Use the Word

12.1 Word 1:

12.2 Word 2:

12.3 Word 3:

Chapter 13

A. Identify the Example

Chapter 14

B. What Does Sleep Support?

14.1 Word Bank

Chapter 15

C. One-Sentence Summary

Chapter 16

A. What Is Chronic Insufficient Sleep?

Chapter 17

B. Major Risks Linked With Chronic Insufficient Sleep

- 17.1 1. Impaired Attention and Thinking
- 17.2 2. Mood Changes
- 17.3 3. Cardiovascular Risk
- 17.4 4. Metabolic Effects
- 17.5 5. Immune Effects
- 17.6 6. Accident and Safety Risk

Chapter 18

C. Check for Understanding

Chapter 19

A. What Is Sleep Hygiene?

Chapter 20

B. Habits That Support Better Sleep

- 20.1 1. Keep a Consistent Sleep Schedule
- 20.2 2. Limit Caffeine Late in the Day
- 20.3 3. Reduce Screen and Bright Light Exposure Before Bed
- 20.4 4. Create a Sleep-Friendly Environment
- 20.5 5. Avoid Alcohol as a Sleep Aid
- 20.6 6. Build a Wind-Down Routine
- 20.7 7. Use Naps Carefully

Chapter 21

C. Sleep Hygiene Planner

Chapter 22

A. Why Clinical Care Matters

Chapter 23

B. Consider Professional Help If You Experience:

- 23.1 1. Chronic Insomnia
- 23.2 2. Loud Snoring or Pauses in Breathing
- 23.3 3. Excessive Daytime Sleepiness
- 23.4 4. Restless Legs Symptoms
- 23.5 5. Drowsy Driving
- 23.6 6. Nightmares or Trauma-Related Sleep Disruption
- 23.7 7. Sleep Problems Affecting Daily Life

Chapter 24

C. Care-Seeking Decision Check

24.1 If you checked "Yes" to any item:

Chapter 25

Directions

Chapter 26

Scenario 1: The Late-Night Student

- 26.1 1. Is Maya getting enough sleep for most people? Explain.
- 26.2 2. What is one risk if this pattern continues?
- 26.3 3. What is one sleep hygiene habit Maya could try?

Chapter 27

Scenario 2: The Weekend Catch-Up

- 27.1 1. What might be happening to Jordan's sleep schedule?
- 27.2 2. Why might consistency help?
- 27.3 3. What is one realistic change Jordan could make?

Chapter 28

Scenario 3: The "Alcohol Helps Me Sleep" Claim

- 28.1 1. What is partly true about Chris's statement?
- 28.2 2. What is misleading or risky about the statement?
- 28.3 3. What is a healthier wind-down alternative?

Chapter 29

Scenario 4: The Snoring Warning

- 29.1 1. What concern should Elena consider?
- 29.2 2. Should Elena seek professional help? Why?
- 29.3 3. What should Elena avoid doing if she feels dangerously sleepy?

Chapter 30

Directions

- 30.1 1. Rest can reduce fatigue and stress, but it does not fully replace sleep.
- 30.2 2. Sleep only matters for the brain, not the body.
- 30.3 3. Chronic insufficient sleep can increase accident risk because it

slows attention and reaction time.

30.4 4. Caffeine late in the day can make sleep harder for some people.

30.5 5. Alcohol is a reliable sleep aid because it always improves sleep quality.

30.6 6. Loud snoring, gasping, or pauses in breathing during sleep can be a reason to seek medical evaluation.

30.7 7. A cool, dark, quiet room can support better sleep.

30.8 8. If someone is dangerously sleepy while driving, they should keep going and open a window.

Chapter 31

A. Three Things I Learned

31.1 1.

31.2 2.

31.3 3.

Chapter 32

B. Explain the Memory Sentence

Chapter 33

C. My Sleep Support Action Plan

33.1 My goal:

33.2 Why this goal matters:

33.3 One barrier I might face:

33.4 My plan for handling that barrier:

33.5 How I will know if the plan helped:

Chapter 34

D. QRU Exit Ticket

34.1 1. Why is sleep biologically essential?

34.2 2. Why can rest help but not fully replace sleep?

34.3 3. Name one sleep concern that should lead someone to seek professional help.

Chapter 35

Learning Goal Alignment

Chapter 36

Part 1: Warm-Up Guidance

Chapter 37

Part 2: Core Lesson Guidance

Chapter 38

Part 3: Vocabulary Matching Key

38.1 Vocabulary Sentence Guidance

Chapter 39

Part 4: Guided Practice Key

39.1 A. Sleep or Rest?

39.2 B. What Does Sleep Support?

39.3 C. One-Sentence Summary

Chapter 40

Part 5: Chronic Insufficient Sleep Risks Key

Chapter 41

Part 6: Sleep Hygiene Planner Guidance

Chapter 42

Part 7: Care-Seeking Decision Check Guidance

Chapter 43

Part 8: Scenario Practice Sample Answers

43.1 Scenario 1: The Late-Night Student

43.2 Scenario 2: The Weekend Catch-Up

43.3 Scenario 3: The "Alcohol Helps Me Sleep" Claim

43.4 Scenario 4: The Snoring Warning

Chapter 44

Part 9: True/False Correction Key

44.1 1. Rest can reduce fatigue and stress, but it does not fully replace sleep.

44.2 2. Sleep only matters for the brain, not the body.

44.3 3. Chronic insufficient sleep can increase accident risk because it slows attention and reaction time.

44.4 4. Caffeine late in the day can make sleep harder for some people.

44.5 5. Alcohol is a reliable sleep aid because it always improves sleep quality.

44.6 6. Loud snoring, gasping, or pauses in breathing during sleep can be a reason to seek medical evaluation.

44.7 7. A cool, dark, quiet room can support better sleep.

44.8 8. If someone is dangerously sleepy while driving, they should keep going and open a window.

Chapter 45

Part 10: Final Reflection and Action Plan Guidance

Chapter 46

Final QRU Takeaway

CHAPTER 1

Understanding Sleep and Rest

1.1 Why do humans need sleep, and can rest replace it?

QRU Learning Product | Student Workbook + Facilitator Key

Name:

Date:

Class/Group:

1.2 Educational Use Note

This workbook is for education and skill-building. It is not a substitute for medical advice, diagnosis, or treatment. If sleep problems are severe, persistent, dangerous, or affecting daily life, speak with a qualified healthcare professional.

QRU Standard Footer: Clear Thinking. Practical Skills.
Real-World Readiness.

Page 1

CHAPTER 2

Learning Goals

By the end of this workbook, you will be able to:

1. Explain why sleep is biologically essential.
 2. Describe the difference between sleep and rest.
 3. Identify risks linked with chronic insufficient sleep.
 4. Recognize evidence-based sleep hygiene habits.
 5. Decide when someone should seek clinical care for sleep-related concerns.
-

CHAPTER 3

Big Idea

Sleep is not just "doing nothing."

Sleep is an active biological state that supports:

- Brain function
- Learning and memory
- Immune regulation
- Cardiovascular health
- Metabolism
- Emotional regulation
- Physical recovery

Most adults need at least 7 hours of sleep per night. Children and adolescents usually need more.

Rest matters, too. Rest can reduce fatigue, lower stress, and give the mind and body a break. However, rest does not fully replace the sleep-stage-dependent biological functions that happen during healthy sleep.

Memory Sentence:

Rest can pause the drain, but sleep does the repair.

CHAPTER 4

Workbook Roadmap

- | Part | Focus |
 - |---|---|
 - | Part 1 | Warm-Up Reflection |
 - | Part 2 | Core Lesson: Sleep vs. Rest |
 - | Part 3 | Vocabulary Matching |
 - | Part 4 | Guided Practice: Sleep or Rest? |
 - | Part 5 | Chronic Insufficient Sleep Risks |
 - | Part 6 | Sleep Hygiene Habits |
 - | Part 7 | When to Seek Professional Help |
 - | Part 8 | Scenario Practice |
 - | Part 9 | True/False Correction |
 - | Part 10 | Final Reflection and Action Plan |
 - | Part 11 | Facilitator/Teacher Key |
-

QRU Standard Footer: Clear Thinking. Practical Skills.
Real-World Readiness.
Page 2

Part 1: Warm-Up

CHAPTER 5

A. Quick Reflection

Answer in complete sentences.

5.1 1. When you do not get enough sleep, what changes do you notice in yourself?

5.2 2. What is one way rest might help a tired person during the day?

5.3 3. Do you think resting quietly can fully replace sleep? Why or why not?

CHAPTER 6

B. Everyday Analogy

Read the analogy below.

Rest is like parking a car for a while so the engine cools down.

Sleep is like taking the car into the shop for essential maintenance, system checks, and repairs.

6.1 In your own words, explain what this analogy means.

CHAPTER 7

C. Before You Learn

Circle your current answer.

7.1 1. Sleep is mostly the same as rest.

Agree / Not Sure / Disagree

7.2 2. A person can be lying down quietly and still not receive the full benefits of sleep.

Agree / Not Sure / Disagree

7.3 3. Chronic insufficient sleep can affect the brain, mood, heart, metabolism, immune system, and safety.

Agree / Not Sure / Disagree

QRU Standard Footer: Clear Thinking. Practical Skills.
Real-World Readiness.

Page 3

Part 2: Core Lesson - Sleep vs. Rest

CHAPTER 8

A. What Is Sleep?

Sleep is a biologically essential state with organized changes in brain activity, hormones, breathing, heart rate, temperature, and body repair processes.

During healthy sleep, the body cycles through different stages, including:

- Non-REM sleep, including deeper sleep stages that support physical restoration and other body maintenance processes.
- REM sleep, which is important for dreaming, emotional processing, and aspects of learning and memory.

Sleep supports:

1. Attention and thinking
 2. Learning and memory consolidation
 3. Emotional balance
 4. Immune regulation
 5. Metabolic health
 6. Cardiovascular health
 7. Physical recovery
-

CHAPTER 9

B. What Is Rest?

Rest is a period of reduced physical or mental demand.

Examples of rest include:

- Sitting quietly
- Taking a break from work
- Stretching gently
- Practicing slow breathing
- Listening to calm music
- Closing your eyes without sleeping

Rest is helpful because it can:

- Reduce stress
- Lower immediate fatigue
- Help the body calm down
- Give the mind a break
- Support recovery between activities

However, rest is not the same as sleep.

CHAPTER 10

C. Why Rest Cannot Fully Replace Sleep

Rest can help you feel calmer and less drained, but it cannot reproduce all of the biological functions that depend on sleep stages.

For example, enough high-quality sleep helps with:

- Memory consolidation
- Emotional processing

- Hormonal regulation
- Immune system regulation
- Metabolic balance
- Brain and body recovery processes that occur during sleep cycles

Key QRU Understanding:

Rest is valuable, but it is not a full substitute for sleep.

Rest reduces demand. Sleep performs maintenance.

QRU Standard Footer: Clear Thinking. Practical Skills.
Real-World Readiness.

Page 4

Part 3: Key Vocabulary

CHAPTER 11

A. Vocabulary Matching

Match each term to its correct meaning.

| Term | Meaning |

|---|---|

| 1. Sleep | A. Evidence-based habits and environmental choices that support better sleep quality. |

| 2. Rest | B. The ability to stay alert and focus on information or tasks. |

| 3. Sleep hygiene | C. A biologically essential state that supports

brain function, body repair, immune regulation, heart health, metabolism, and emotional balance. |

| 4. Chronic insufficient sleep | D. A period of reduced physical or mental demand that can help recovery but does not fully replace sleep. |

| 5. Attention | E. Repeatedly getting less sleep than the body needs over time. |

| 6. Metabolism | F. The body's processes for using energy from food and regulating blood sugar, hunger, and energy balance. |

| 7. Drowsy driving | G. Driving while sleepy, which can slow reaction time and increase crash risk. |

11.1 Write your answers:

- 1.
- 2.
- 3.
- 4.
- 5.
- 6.
- 7.

CHAPTER 12

B. Use the Word

Choose three vocabulary words and write one sentence for each.

12.1 Word 1:

Sentence:

12.2 Word 2:

Sentence:

12.3 Word 3:

Sentence:

QRU Standard Footer: Clear Thinking. Practical Skills.
Real-World Readiness.

Page 5

Part 4: Guided Practice - Sleep or Rest?

CHAPTER 13

A. Identify the Example

Read each example. Write S if it describes sleep. Write R if it describes rest.

| Example | S or R? |

|---|---|

| 1. Lying quietly on the couch with your eyes closed for 15

minutes. | |

| 2. Getting a full night of high-quality sleep. | |

| 3. Taking a short break from mental work. | |

| 4. A biologically essential process that supports brain and body recovery. | |

| 5. Reducing physical or mental demand without fully replacing sleep. | |

| 6. Cycling through sleep stages that support memory, recovery, and regulation. | |

| 7. Sitting outside quietly after a stressful day. | |

| 8. Sleeping through the night and waking refreshed. | |

—

CHAPTER 14

B. What Does Sleep Support?

Complete the sentences using the word bank.

14.1 Word Bank

brain function

immune regulation

cardiovascular health

metabolism

emotional regulation

physical recovery

Sleep supports:

1. by helping with attention, learning, and memory.
2. by helping the body respond to illness and regulate

inflammation.

3. by supporting healthy blood pressure and heart function.
 4. by helping regulate energy use, appetite, and blood sugar.
 5. by helping people manage stress and mood.
 6. by supporting restoration after daily activity.
-

CHAPTER 15

C. One-Sentence Summary

Complete the QRU summary sentence.

Rest helps by ,

but sleep is necessary because

.

QRU Standard Footer: Clear Thinking. Practical Skills.
Real-World Readiness.

Page 6

Part 5: Chronic Insufficient Sleep Risks

CHAPTER 16

A. What Is Chronic Insufficient Sleep?

Chronic insufficient sleep means regularly getting less sleep than your body needs over time.

It may happen because of:

- Busy schedules
- Stress
- Technology use late at night
- Irregular work or school demands
- Caregiving responsibilities
- Sleep disorders
- Pain, anxiety, trauma, or other health concerns

One short night of sleep can make a person tired. Repeated short sleep can create larger risks.

CHAPTER 17

B. Major Risks Linked With Chronic Insufficient Sleep

17.1 1. Impaired Attention and Thinking

Not getting enough sleep can affect:

- Focus
- Reaction time
- Problem-solving
- Memory
- Learning
- Decision-making

A sleepy brain often works slower and makes more mistakes.

17.2 2. Mood Changes

Chronic insufficient sleep can contribute to:

- Irritability
- Stress sensitivity
- Anxiety symptoms
- Depressed mood
- Emotional overreactions
- Lower motivation

Sleep does not solve every emotional challenge, but healthy sleep supports emotional regulation.

17.3 3. Cardiovascular Risk

Long-term insufficient sleep is associated with increased risk for cardiovascular problems, including:

- High blood pressure
- Heart disease
- Stroke risk
- Poorer heart and blood vessel regulation

Sleep is one part of overall heart health, along with nutrition, activity, medical care, stress management, and other factors.

17.4 4. Metabolic Effects

Insufficient sleep can affect metabolism by influencing:

- Appetite hormones
- Hunger and cravings
- Blood sugar regulation
- Insulin sensitivity
- Weight regulation

Over time, chronic insufficient sleep is associated with higher risk of metabolic problems, including type 2 diabetes.

17.5 5. Immune Effects

Sleep helps regulate immune function. Not getting enough sleep can affect:

- The body's response to infection
- Inflammation regulation
- Recovery from illness
- Vaccine response in some cases

Sleep is not a guarantee against illness, but it supports immune readiness.

17.6 6. Accident and Safety Risk

Sleepiness can be dangerous. Chronic insufficient sleep increases risk for:

- Drowsy driving crashes
- Workplace errors
- School or sports mistakes
- Slower reaction time
- Injuries

Safety Rule:

If you are too sleepy to drive safely, do not drive. Resting briefly may help temporarily, but it does not replace enough sleep.

CHAPTER 18

C. Check for Understanding

Write one risk of chronic insufficient sleep in each category.

| Category | One Risk or Effect |

|---|---|

| Attention/thinking | |

| Mood | |

| Cardiovascular health | |

| Metabolism | |

| Immune function | |

| Safety/accidents | |

QRU Standard Footer: Clear Thinking. Practical Skills.
Real-World Readiness.

Page 7

Part 6: Evidence-Based Sleep Hygiene Habits

CHAPTER 19

A. What Is Sleep Hygiene?

Sleep hygiene means habits and environmental choices that support healthy sleep.

Sleep hygiene cannot fix every sleep problem, especially medical sleep disorders, but it is a strong foundation for better sleep quality.

CHAPTER 20

B. Habits That Support Better Sleep

20.1 1. Keep a Consistent Sleep Schedule

Try to go to bed and wake up at similar times each day, including weekends when possible.

A consistent schedule helps train the body's internal clock.

20.2 2. Limit Caffeine Late in the Day

Caffeine can stay active in the body for hours.

Common caffeine sources include:

- Coffee
- Energy drinks
- Some teas
- Cola
- Chocolate
- Some medications or supplements

Many people sleep better when they avoid caffeine in the late afternoon and evening.

20.3 3. Reduce Screen and Bright Light Exposure Before Bed

Bright light and stimulating content can make it harder to fall asleep.

Helpful strategies include:

- Dimming lights in the evening
 - Reducing phone, tablet, computer, and TV use before bed
 - Using night mode or blue-light reduction settings
 - Avoiding emotionally intense content right before sleep
-

20.4 4. Create a Sleep-Friendly Environment

A good sleep environment is usually:

- Cool
- Dark

- Quiet
- Comfortable
- Safe

Helpful tools may include blackout curtains, earplugs, white noise, fans, or comfortable bedding.

20.5 5. Avoid Alcohol as a Sleep Aid

Alcohol may make a person feel sleepy at first, but it can disrupt sleep quality later in the night.

Alcohol can worsen snoring, breathing problems during sleep, awakenings, and poor-quality rest.

20.6 6. Build a Wind-Down Routine

A calming routine signals the body that sleep is approaching.

Examples:

- Reading something calming
 - Gentle stretching
 - Slow breathing
 - Taking a warm shower
 - Journaling worries earlier in the evening
 - Preparing for the next day
-

20.7 7. Use Naps Carefully

Short naps can help some people, but long or late naps may make nighttime sleep harder.

If naps interfere with nighttime sleep, adjust their timing or length.

CHAPTER 21

C. Sleep Hygiene Planner

Choose three habits you could realistically improve.

Sleep Hygiene Habit	My Current Pattern	One Improvement I Can Try
--- --- ---		
Consistent schedule		
Caffeine timing		
Screen/light exposure		
Sleep environment		
Alcohol as sleep aid		
Wind-down routine		
Nap habits		

Part 7: When to Seek Professional Help

CHAPTER 22

A. Why Clinical Care Matters

Some sleep problems improve with better habits. Others may be signs of medical, mental health, neurological, or breathing-related conditions.

Seeking help is not a failure. It is a smart safety and health decision.

CHAPTER 23

B. Consider Professional Help If You Experience:

23.1 1. Chronic Insomnia

Seek help if you regularly have trouble:

- Falling asleep
- Staying asleep
- Waking too early
- Feeling unrefreshed after sleep

This is especially important if it lasts for weeks or months or affects daily life.

23.2 2. Loud Snoring or Pauses in Breathing

Loud snoring, choking, gasping, or observed pauses in breathing

during sleep may be signs of sleep apnea.

Sleep apnea can affect oxygen levels, daytime alertness, blood pressure, and heart health.

23.3 3. Excessive Daytime Sleepiness

Seek care if you often feel so sleepy that you:

- Struggle to stay awake in class, meetings, or conversations
 - Fall asleep unintentionally
 - Need frequent naps despite enough time in bed
 - Feel unsafe driving or working
-

23.4 4. Restless Legs Symptoms

Restless legs symptoms may include:

- Uncomfortable sensations in the legs
 - A strong urge to move the legs
 - Symptoms worse at rest or at night
 - Temporary relief with movement
-

23.5 5. Drowsy Driving

Drowsy driving is a safety warning sign.

Do not drive if you are too sleepy to stay alert. Pull over safely, switch drivers, use safe transportation, or delay travel.

23.6 6. Nightmares or Trauma-Related Sleep Disruption

Professional support may help if sleep is disrupted by:

- Frequent nightmares
 - Panic during sleep
 - Trauma reminders
 - Fear of sleeping
 - Nighttime anxiety that affects functioning
-

23.7 7. Sleep Problems Affecting Daily Life

Seek help when sleep problems interfere with:

- School or work
 - Relationships
 - Mood
 - Safety
 - Health
 - Daily responsibilities
-

CHAPTER 24

C. Care-Seeking Decision Check

Read each statement. Check Yes or No.

| Statement | Yes | No |

|---|---:|---:|

| I regularly have trouble falling or staying asleep. | ? | ? |

I wake up feeling unrefreshed most days.	?	?
Someone has noticed loud snoring, gasping, choking, or pauses in my breathing.	?	?
I feel excessively sleepy during the day.	?	?
I have felt unsafe driving because of sleepiness.	?	?
I have restless legs symptoms at night.	?	?
Nightmares, trauma, anxiety, or stress are disrupting my sleep.	?	?
Sleep problems are affecting school, work, relationships, or daily life.	?	?

24.1 If you checked "Yes" to any item:

Write one safe next step.

QRU Standard Footer: Clear Thinking. Practical Skills.
Real-World Readiness.
Page 9

Part 8: Scenario Practice

CHAPTER 25

Directions

Read each scenario. Answer the questions using complete sentences.

CHAPTER 26

Scenario 1: The Late-Night Student

Maya studies until 1:00 a.m. most school nights. She wakes up at 6:00 a.m. She says, "I'm fine because I rest on the bus and scroll my phone to relax before bed."

26.1 1. Is Maya getting enough sleep for most people? Explain.

26.2 2. What is one risk if this pattern continues?

26.3 3. What is one sleep hygiene habit Maya could try?

CHAPTER 27

Scenario 2: The Weekend Catch-Up

Jordan sleeps 5 hours on weeknights and 11 hours on weekends. On Mondays, Jordan feels groggy and unfocused.

27.1 1. What might be happening to Jordan's sleep schedule?

27.2 2. Why might consistency help?

27.3 3. What is one realistic change Jordan could make?

CHAPTER 28

Scenario 3: The "Alcohol Helps Me Sleep" Claim

Chris says, "A drink before bed helps me fall asleep, so it must be good for sleep."

28.1 1. What is partly true about Chris's statement?

28.2 2. What is misleading or risky about the statement?

28.3 3. What is a healthier wind-down alternative?

CHAPTER 29

Scenario 4: The Snoring Warning

A family member tells Elena that she snores loudly and sometimes seems to stop breathing during sleep. Elena also feels sleepy during the day.

29.1 1. What concern should Elena consider?

29.2 2. Should Elena seek professional help? Why?

29.3 3. What should Elena avoid doing if she feels dangerously sleepy?

QRU Standard Footer: Clear Thinking. Practical Skills.
Real-World Readiness.

Page 10

Part 9: True/False Correction

CHAPTER 30

Directions

Read each statement.

1. Write T if the statement is true.
 2. Write F if the statement is false.
 3. If it is false, rewrite it to make it true.
- _____

30.1 1. Rest can reduce fatigue and stress, but it does not fully replace sleep.

T / F:

Correction if false:

30.2 2. Sleep only matters for the brain, not the body.

T / F:

Correction if false:

30.3 3. Chronic insufficient sleep can increase accident risk because it slows attention and reaction time.

T / F:

Correction if false:

30.4 4. Caffeine late in the day can make sleep harder for some people.

T / F:

Correction if false:

30.5 5. Alcohol is a reliable sleep aid because it always improves sleep quality.

T / F:

Correction if false:

30.6 6. Loud snoring, gasping, or pauses in breathing during sleep can be a reason to seek medical evaluation.

T / F:

Correction if false:

30.7 7. A cool, dark, quiet room can support better sleep.

T / F:

Correction if false:

30.8 8. If someone is dangerously sleepy while driving, they should keep going and open a window.

T / F:

Correction if false:

Part 10: Final Reflection and Action Plan

CHAPTER 31

A. Three Things I Learned

Write three important ideas from this workbook.

31.1 1.

31.2 2.

31.3 3.

CHAPTER 32

B. Explain the Memory Sentence

Rest can pause the drain, but sleep does the repair.

In your own words, explain what this means.

CHAPTER 33

C. My Sleep Support Action Plan

Choose one realistic sleep habit to practice this week.

33.1 My goal:

33.2 Why this goal matters:

33.3 One barrier I might face:

33.4 My plan for handling that barrier:

33.5 How I will know if the plan helped:

CHAPTER 34

D. QRU Exit Ticket

Answer in one or two sentences.

34.1 1. Why is sleep biologically essential?

34.2 2. Why can rest help but not fully replace sleep?

34.3 3. Name one sleep concern that should lead someone to seek professional help.

QRU Standard Footer: Clear Thinking. Practical Skills.
Real-World Readiness.

| 5. Decide when someone should seek clinical care. | Parts 7, 8, 9, 10 |

—

CHAPTER 36

Part 1: Warm-Up Guidance

Student answers will vary.

Strong responses should show:

- Sleep affects energy, attention, mood, learning, or physical functioning.
- Rest may help reduce stress or fatigue during the day.
- Resting quietly does not fully replace sleep because sleep includes biological processes and sleep stages.

—

CHAPTER 37

Part 2: Core Lesson Guidance

Students should understand:

- Sleep is biologically active, not passive.
 - Rest lowers demand and may reduce fatigue or stress.
 - Sleep includes stage-dependent functions that rest cannot fully reproduce.
 - Both sleep and rest are valuable, but they are not interchangeable.
-

CHAPTER 38

Part 3: Vocabulary Matching Key

1. C
2. D
3. A
4. E
5. B
6. F
7. G

38.1 Vocabulary Sentence Guidance

Accept sentences that use the term accurately.

Example:

- "Sleep hygiene includes keeping a consistent bedtime and

limiting caffeine late in the day."

- "Drowsy driving is dangerous because sleepiness slows reaction time."

CHAPTER 39

Part 4: Guided Practice Key

39.1 A. Sleep or Rest?

Item	Answer
1	R
2	S
3	R
4	S
5	R
6	S
7	R
8	S

39.2 B. What Does Sleep Support?

1. Brain function
2. Immune regulation
3. Cardiovascular health
4. Metabolism
5. Emotional regulation
6. Physical recovery

39.3 C. One-Sentence Summary

Accept answers similar to:

"Rest helps by lowering stress and reducing demand, but sleep is necessary because the brain and body perform important maintenance during sleep stages."

Real-World Readiness.

Page 13

Facilitator/Teacher Key Continued

CHAPTER 40

Part 5: Chronic Insufficient Sleep Risks Key

Accept examples such as:

Category	Acceptable Answers
Attention/thinking	Poor focus, slower reaction time, memory problems, more mistakes
Mood	Irritability, anxiety symptoms, depressed mood, emotional reactivity
Cardiovascular health	Higher blood pressure, heart disease risk, stroke risk
Metabolism	Blood sugar issues, appetite changes, insulin resistance, weight regulation problems

| Immune function | More difficulty fighting infection, inflammation changes, slower recovery |

| Safety/accidents | Drowsy driving, workplace errors, injuries, crashes |

CHAPTER 41

Part 6: Sleep Hygiene Planner Guidance

Student responses will vary.

Strong plans are:

- Specific
- Realistic
- Connected to sleep quality
- Focused on habits the student can control

Examples:

- "I will stop drinking caffeine after 2:00 p.m."
 - "I will put my phone away 30 minutes before bed."
 - "I will keep my room darker and cooler."
 - "I will wake up within the same one-hour window each day."
-

CHAPTER 42

Part 7: Care-Seeking Decision Check Guidance

If students check "Yes," acceptable next steps include:

- Talk to a parent, caregiver, school nurse, counselor, physician, or healthcare professional.
- Avoid drowsy driving.
- Track sleep symptoms and discuss them with a clinician.
- Seek urgent help if safety is at risk.

Emphasize that the workbook does not diagnose conditions.

CHAPTER 43

Part 8: Scenario Practice Sample Answers

43.1 Scenario 1: The Late-Night Student

1. Maya is likely not getting enough sleep if she sleeps only about 5 hours on school nights.
2. Risks include poor attention, mood changes, weaker learning, immune effects, or accident risk.
3. She could reduce screen use before bed, start studying earlier, keep a consistent bedtime, or limit caffeine.

43.2 Scenario 2: The Weekend Catch-Up

1. Jordan's schedule is inconsistent, and weekday sleep may be insufficient.
2. Consistency helps the body's internal clock and may improve sleep quality and alertness.
3. Jordan could move bedtime earlier on weeknights, wake closer to the same time daily, or reduce late-night activities.

43.3 Scenario 3: The "Alcohol Helps Me Sleep" Claim

1. Alcohol may make Chris feel sleepy at first.
2. It can disrupt sleep quality later and worsen breathing problems, awakenings, and snoring.
3. Healthier alternatives include a wind-down routine, reading, stretching, slow breathing, or reducing bright light.

43.4 Scenario 4: The Snoring Warning

1. Elena should consider possible sleep apnea or another sleep-related breathing issue.
2. Yes. Loud snoring, pauses in breathing, and daytime sleepiness are reasons to seek medical evaluation.
3. She should avoid driving or doing dangerous tasks when dangerously sleepy.

CHAPTER 44

Part 9: True/False Correction Key

44.1 1. Rest can reduce fatigue and stress, but it does

not fully replace sleep.

True

44.2 2. Sleep only matters for the brain, not the body.

False

Corrected version:

Sleep supports both the brain and the body, including immune function, metabolism, cardiovascular health, emotional regulation, and physical recovery.

44.3 3. Chronic insufficient sleep can increase accident risk because it slows attention and reaction time.

True

44.4 4. Caffeine late in the day can make sleep harder for some people.

True

44.5 5. Alcohol is a reliable sleep aid because it always improves sleep quality.

False

Corrected version:

Alcohol may make someone feel sleepy at first, but it can disrupt sleep quality later in the night and is not a healthy sleep aid.

44.6 6. Loud snoring, gasping, or pauses in breathing during sleep can be a reason to seek medical evaluation.

True

44.7 7. A cool, dark, quiet room can support better sleep.

True

44.8 8. If someone is dangerously sleepy while driving, they should keep going and open a window.

False

Corrected version:

If someone is dangerously sleepy while driving, they should stop driving safely, switch drivers, delay travel, or use safe transportation. Opening a window is not a reliable solution.

CHAPTER 45

Part 10: Final Reflection and Action Plan

Guidance

Strong student reflections should include:

- Sleep is biologically essential.
- Rest is helpful but not a full substitute for sleep.
- Chronic insufficient sleep has real health and safety risks.
- Sleep hygiene habits can support better sleep.
- Certain sleep problems require professional help.

Strong action plans should be:

- Specific
- Realistic
- Time-based
- Connected to a barrier and solution

Example:

"My goal is to stop using my phone 30 minutes before bed on school nights. This matters because bright light and scrolling make it harder for me to fall asleep. My barrier is boredom, so I will keep a book near my bed. I will know it helped if I fall asleep faster or feel more alert in the morning."

Page 15

QRU Completion Check

Before finishing, confirm that you can answer each question.

| Skill | I Can Do This |

|---|---:|

| I can explain why sleep is biologically essential. | ? |

| I can describe how sleep and rest are different. | ? |

| I can name risks of chronic insufficient sleep. | ? |

| I can identify sleep hygiene habits that support better sleep. | ? |

| I can recognize when someone should seek professional help for sleep concerns. | ? |

CHAPTER 46

Final QRU Takeaway

Sleep is active biological maintenance. Rest is valuable because it reduces demand and supports calm recovery, but it cannot fully replace the brain and body functions that occur during healthy sleep stages.

Rest can pause the drain, but sleep does the repair.
