CHAPTER 1

Core Educational Message

Hydration supports circulation, temperature control, nutrient transport, kidney waste removal, muscle function, and physical performance. Dehydration may affect attention, memory, mood, or energy in some people, especially during heat, sweating, illness, or prolonged activity.

QRU Quick-Recall™:

Water keeps your body moving, cooling, thinking, and cleaning.

Consumer Disclaimer:

This is general education, not personal medical advice. Fluid needs vary by body size, activity level, climate, health status, pregnancy/lactation, and medications. If you have kidney disease, heart failure, fluid restrictions, or other medical conditions, follow your clinician's guidance.

CHAPTER 2

Instagram

2.1 Suggested Graphic Text

Why Hydration Matters

Hydration helps your body:

Circulate blood

Stay cool

Move nutrients
Remove waste
Support focus + energy
Move and perform

QRU Quick-Recall™:

Water keeps your body moving, cooling, thinking, and cleaning.

2.2 Caption

Water does more than stop thirst — it helps your body run.

Hydration supports:

Blood circulation
Body temperature control
Nutrient transport
Waste removal through the kidneys
Muscle function and physical performance
Attention, mood, memory, and energy in some people

Dehydration may affect how you feel or function, especially during hot weather, sweating, illness, travel, long shifts, or prolonged exercise.

A practical cue: check thirst and urine color. For many healthy people, pale straw or light yellow urine can suggest adequate fluids. But urine color is only a rough clue — vitamins, foods, medications, supplements, and some health conditions can change it. Completely clear urine is not always necessary or ideal.

Simple action step:

Pair water with meals, carry water during heat or activity, and plan fluids before long outdoor work, travel, or exercise.

Heat-safety reminder:

Seek urgent medical help for confusion, fainting, severe weakness, rapid heartbeat, overheating, very dark urine, or not urinating.

QRU Quick-Recall™:

Water keeps your body moving, cooling, thinking, and cleaning.

This is general education, not personal medical advice. Fluid needs vary. If you have kidney disease, heart failure, fluid restrictions, pregnancy/lactation, certain medications, or medical conditions, follow clinician guidance.

Call to Action:

Save this as your hydration reminder — and share it with someone training, working, or traveling in the heat.

CHAPTER 3

X Thread

3.1 Post 1

Water does more than stop thirst.

Hydration helps your body:

Circulate blood

Regulate temperature

Move nutrients

Remove waste

Support muscles

QRU Quick-Recall™:

Water keeps your body moving, cooling, thinking, and cleaning.

3.2 Post 2

Dehydration may affect attention, memory, mood, or energy in some people—especially with heat, sweating, illness, or long activity.

Possible cues: thirst, fatigue, headache, dizziness, darker urine, or lower exercise performance.

Needs vary. Listen to your body.

3.3 Post 3

Urine color is only a rough cue.

For many healthy people, pale straw/light yellow can suggest adequate fluids. Completely clear urine is not always necessary or

ideal.

Vitamins, foods, medications, and health conditions can change color.

3.4 Post 4

Practical hydration habit:

Pair water with meals

Carry water in heat or during activity

Plan fluids before long outdoor work, travel, or exercise

Small cues + simple routines can help you stay ahead of thirst.

3.5 Post 5

Heat safety: seek urgent help for confusion, fainting, severe weakness, rapid heartbeat, overheating, very dark urine, or not urinating.

General education—not medical advice. Fluid needs vary by health status, meds, pregnancy/lactation, and fluid limits. Ask a clinician.

4.2 Post Copy

Hydration is not just about avoiding thirst. Water helps your body circulate blood, regulate temperature, move nutrients, remove waste through the kidneys, and support muscle function.

Dehydration may affect attention, memory, mood, or energy in some people — especially during heat, sweating, illness, long shifts, travel, or prolonged activity.

A simple hydration check: notice thirst and urine color. For many healthy people, pale straw or light yellow urine can suggest adequate fluid intake. But urine color is only a rough cue. Vitamins, foods, medications, supplements, and some health conditions can change it. Completely clear urine is not always necessary or ideal.

Try this today:

Drink water with meals, keep water nearby during heat or activity, and plan fluids before long outdoor work or exercise.

Heat-safety reminder:

Seek urgent medical help for confusion, fainting, severe weakness, rapid heartbeat, overheating, very dark urine, or not urinating.

This is general education, not personal medical advice. Fluid needs vary by health status and medications. If you have kidney disease, heart failure, fluid restrictions, pregnancy/lactation, or other medical conditions, follow clinician guidance.

QRU Quick-Recall™:

Water keeps your body moving, cooling, thinking, and cleaning.

CHAPTER 5

LinkedIn

5.1 Suggested Graphic Text

Hydration Supports Daily Performance

Water helps with:

1. Circulation
2. Temperature regulation
3. Nutrient transport
4. Kidney waste removal
5. Muscle function
6. Attention, mood, and energy support in some people

QRU Quick-Recall™:

Water keeps your body moving, cooling, thinking, and cleaning.

5.2 Post Copy

Hydration is a simple health habit with broad impact.

Water supports circulation, temperature regulation, nutrient transport, kidney waste removal, muscle function, and physical performance. Dehydration may affect attention, memory, mood, or

energy in some people — particularly during heat exposure, sweating, illness, travel, long workdays, or prolonged activity.

A useful workplace wellness reminder: hydration planning matters most before the need is urgent.

Practical steps:

- Pair water with meals or regular breaks.

- Keep water available during heat, outdoor work, exercise, or travel.

- Plan fluids before long shifts or physically demanding tasks.

- Use thirst and urine color as general cues — not perfect measurements.

For many healthy people, pale straw or light yellow urine can suggest adequate hydration. Completely clear urine is not always necessary or ideal, and urine color can change because of vitamins, foods, medications, supplements, or medical conditions.

Heat-safety reminder:

Confusion, fainting, severe weakness, rapid heartbeat, overheating, very dark urine, or not urinating can be warning signs that need urgent medical attention.

This is general education, not personal medical advice. Fluid needs vary by body size, activity, climate, health status, medications, pregnancy/lactation, and fluid restrictions. People with kidney disease, heart failure, or other medical conditions should follow clinician guidance.

QRU Quick-Recall™:

Water keeps your body moving, cooling, thinking, and cleaning.

CHAPTER 7

Reel/Short-Form Video Script

7.1 Reel Title

Why Hydration Matters

7.2 On-Screen Text + Voiceover

Scene 1: Person filling a water bottle

On-screen text: Water does more than stop thirst.

Voiceover: Water helps your body do some of its most important daily jobs.

Scene 2: Icons appear one by one

On-screen text: Circulation. Cooling. Nutrients. Waste removal.

Voiceover: Hydration supports blood circulation, temperature control, nutrient transport, and waste removal through the kidneys.

Scene 3: Person walking, working, or exercising

On-screen text: Energy + performance support

Voiceover: Dehydration may affect attention, memory, mood, energy, or physical performance in some people — especially with heat or prolonged activity.

Scene 4: Water bottle beside meal or desk

On-screen text: Simple habit: pair water with meals.

Voiceover: A simple habit is to pair water with meals or keep water nearby during heat, exercise, travel, or outdoor work.

Scene 5: Pale yellow color cue graphic

On-screen text: Urine color = rough cue, not a perfect test.

Voiceover: Pale straw or light yellow urine can be a helpful cue for many healthy people, but it is not perfect — and completely clear is not always necessary.

Scene 6: Final branded screen

On-screen text:

QRU Quick-Recall™

Water keeps your body moving, cooling, thinking, and cleaning.

Voiceover: Remember: water keeps your body moving, cooling, thinking, and cleaning.

7.3 Reel Caption

CHAPTER 8

Carousel Slide Copy

8.1 Slide 1: Cover

Why Hydration Matters

Water helps your body do more than stop thirst.

8.2 Slide 2: Circulation

Hydration helps circulate blood

Blood carries oxygen and nutrients throughout the body. Fluids help support healthy circulation.

8.3 Slide 3: Cooling

Hydration helps regulate temperature

Sweating and blood flow help your body release heat — especially during hot weather or activity.

8.4 Slide 4: Nutrients + Waste

Hydration helps move nutrients and remove waste

Water supports nutrient transport and helps the kidneys remove

waste from the body.

8.5 Slide 5: Brain + Energy

Hydration may affect how you feel

Dehydration may affect attention, memory, mood, or energy in some people — especially during heat, illness, sweating, or long activity.

8.6 Slide 6: Movement

Hydration supports muscles and performance

Fluids help support muscle function and physical performance, especially during exercise or outdoor work.

8.7 Slide 7: Urine Color Cue

Urine color is a rough cue

For many healthy people, pale straw/light yellow urine can suggest adequate fluids.

But it is not a perfect measure — vitamins, foods, medications, and health conditions can change color.

Completely clear urine is not always necessary or ideal.

8.8 Slide 8: Simple Action Step

Try this today

Pair water with meals

Carry water in heat or activity

Plan fluids before long outdoor work, travel, or exercise

8.9 Slide 9: Safety + Disclaimer

Know when to get help

Seek urgent medical help for confusion, fainting, severe weakness, rapid heartbeat, overheating, very dark urine, or not urinating.

General education, not personal medical advice. Fluid needs vary. Follow clinician guidance if you have medical conditions, medications, pregnancy/lactation, or fluid limits.

8.10 Slide 10: QRU Quick-Recall™

QRU Quick-Recall™

Water keeps your body:

Moving. Cooling. Thinking. Cleaning.

Save this reminder for your next hot day, workout, long shift, or outdoor project.

8.11 Carousel Caption

Hydration helps your body circulate blood, regulate temperature, transport nutrients, remove waste through the kidneys, and support movement and performance.

Dehydration may affect attention, memory, mood, or energy in some people — especially during heat, sweating, illness, travel, long shifts, or prolonged activity.

Use thirst and urine color as general cues, not perfect

measurements. Pale straw or light yellow urine can suggest adequate fluids for many healthy people, but completely clear urine is not always necessary or ideal.

Simple hydration habit: pair water with meals, carry water during heat or activity, and plan fluids before long outdoor work or exercise.

QRU Quick-Recall™:

Water keeps your body moving, cooling, thinking, and cleaning.

This is general education, not personal medical advice. Fluid needs vary by health status, medications, pregnancy/lactation, and fluid restrictions. Follow clinician guidance when needed.

8.12 Carousel Alt Text

Ten-slide educational carousel titled “Why Hydration Matters.” Slides explain that hydration supports blood circulation, temperature regulation, nutrient transport, kidney waste removal, attention and energy in some people, muscle function, urine color cues, and practical hydration habits. Final slide includes the QRU Quick-Recall™: “Water keeps your body moving, cooling, thinking, and cleaning.”
