Forex KR - Video Script

Production note: "KR" is not defined in the source material. Before publishing, confirm what "KR" means—for example, a course code, region, language, market, localization tag, or topic focus. If "KR" is not meaningful to learners, remove it from the customer-facing title. Until clarified, this script treats Forex KR as an introductory educational video about forex basics.

Release note: The risk disclaimer must be reviewed for every jurisdiction where this video will be distributed. Do not publish until legal/compliance review confirms the final wording, placement, and on-screen treatment.

Video Overview

Working title: Forex KR: Understanding the Basics of Forex Trading

Estimated length: 5-7 minutes

Audience: Beginners who are new to forex and want a plain-language introduction

Purpose: Explain what forex is, how currency pairs work, why prices move, and what risks learners must understand before exploring further.

Production and accessibility requirements:

- Use captions for all narration and important sound cues.
- Keep on-screen text large, high-contrast, and readable on mobile.
- Do not rely on color alone to communicate meaning; pair colors with labels, arrows, or icons.
- Avoid flashing effects and fast motion that could distract or cause discomfort.
- Keep background music low and ensure narration is clear.
- Use simple diagrams and repeat key terms visually: forex, currency pair, base currency, quote currency, leverage, volatility, and risk.
- If exporting slides or supporting materials, use screen-reader-friendly text instead of flattened image-only text.
- Avoid any wording that could be interpreted as a recommendation to buy, sell, hold, or trade a specific currency pair.
- Use hypothetical examples only. Label examples clearly as educational examples, not trading recommendations.

Tone and pacing:

- Friendly, calm, and beginner-focused.
- Use short sentences and clear definitions.

- Avoid hype, urgency, profit-focused language, or promises of outcomes.
- Emphasize understanding before action.
- Use pauses after key terms so learners have time to process.

Scene-by-scene script:

| Time | Scene / Visual Direction | Narration | On-Screen Text |

|---:---|---|---|

| 0:00-0:08 | Open on a simple animated world map. Currency symbols appear near different regions. Keep movement slow and subtle. | "Every day, people, businesses, banks, and governments exchange one currency for another." | Forex = foreign exchange |

| 0:08-0:20 | Show a traveler looking at a currency exchange board, then transition to a business paying an overseas supplier. | "That global exchange of currencies is called the foreign exchange market, or forex. In this video, we'll explain the basics: what forex is, how currency pairs work, why exchange rates move, and what risks beginners should understand." | Today: forex basics, currency pairs, price movement, and risk |

| 0:20-0:40 | Full-screen disclaimer. Use high-contrast text. No distracting animation. Keep background music very low or remove it. | "Forex trading involves significant risk and may not be suitable for everyone. Prices can move quickly, and using leverage can amplify both gains and losses. This video is for educational purposes only and is not financial, investment, or trading advice." | Risk Notice \nForex trading involves significant risk and may not be suitable for everyone. Prices can move quickly, and using leverage can amplify both gains and losses. This video is for educational purposes only and is not financial, investment, or trading advice. |

| 0:40-1:05 | Return to world map. Show arrows between two countries, then simplify into two currency labels side by side. | "At its simplest, forex means exchanging one currency for another. If someone exchanges U.S. dollars for euros, they are participating in foreign exchange. Forex trading applies that same idea in financial markets, where people buy one currency while selling another." | Forex: exchanging one currency for another |

| 1:05-1:35 | Show a clean diagram of a currency pair: EUR/USD. Label clearly as an educational example. | "Currencies are quoted in pairs. A currency pair compares the value of one currency against another. For example, in the educational example EUR slash USD, EUR is the base currency, and USD is the quote currency." | Educational example only \nEUR/USD \nEUR = base currency \nUSD = quote currency |

| 1:35-2:05 | Highlight the first currency, then the second currency. Use labels and arrows, not color alone. | "The base currency is the first currency in the pair. The quote currency is the second. The exchange rate tells you how much of the quote currency is needed to buy one unit of the base currency." | Base currency: first currency \nQuote currency: second currency \nExchange rate: price of one currency in another |

| 2:05-2:30 | Show a simple price tag animation. Avoid showing real-time market data. Use a clearly hypothetical number. | "For example, if a hypothetical EUR/USD rate were 1.1000, that

would mean one euro equals one point one U.S. dollars. This number can change as market conditions change." | Hypothetical example: \nEUR/USD = 1.1000 \n1 EUR = 1.1000 USD |

| 2:30-3:05 | Show four simple icons: interest rates, economic data, news, market sentiment. | "So why do exchange rates move? Many factors can influence currency prices, including interest rates, inflation, employment data, economic growth, political events, central bank decisions, and overall market sentiment." | Why prices move: \nInterest rates \nEconomic data \nNews and events \nMarket sentiment |

| 3:05-3:30 | Show a calm "push and pull" scale. One side says "demand," the other says "supply." | "Like many markets, forex is affected by supply and demand. If demand for a currency increases compared with another currency, its value may rise. If demand falls, its value may decline. But movements are never guaranteed." | Supply + demand affect exchange rates \nMovements are not guaranteed |

| 3:30-4:05 | Transition to a risk-focused visual: a road sign reading "Risk Ahead." Keep tone serious, not frightening. | "Forex can move quickly. This movement is called volatility. Volatility can create opportunities, but it can also lead to fast and unexpected losses. For beginners, understanding risk is more important than trying to predict every price move." | Volatility: prices can change quickly \nRisk: losses can happen |

| 4:05-4:45 | Show leverage as a magnifying glass over both a plus sign and a minus sign. Avoid implying likely gains. | "Another key risk is leverage. Leverage allows a trader to control a larger position with a smaller amount of money. But leverage magnifies both gains and losses. That means losses can grow quickly, and in some cases may exceed what a beginner expects." | Leverage magnifies outcomes \nPotential gains ? \nPotential losses ? |

| 4:45-5:10 | Show a learner pausing before a decision. Add checklist items one by one. | "Before exploring forex further, ask yourself: Do I understand how currency pairs work? Do I understand the risk? Do I know how leverage affects losses? And am I separating education from financial advice?" | Pause and check: \nDo I understand the pair? \nDo I understand the risk? \nDo I understand leverage? \nIs this education, not advice? |

| 5:10-5:45 | Knowledge check screen. Give learners a few seconds to think before revealing the answer. | "Quick knowledge check: In the pair GBP slash USD, which currency is the base currency? Pause for a moment if you want to answer." | Knowledge check: \nIn GBP/USD, which is the base currency? |

| 5:45-6:00 | Reveal answer with labels. | "The answer is GBP. The base currency is always the first currency in the pair. USD is the quote currency." | Answer: GBP \nGBP = base currency \nUSD = quote currency |

| 6:00-6:30 | Recap with four icons from earlier: forex, currency pair, price movement, risk. | "Let's recap. Forex means exchanging one currency for another. Currencies are traded in pairs. The first currency is the base currency, and the second is the quote currency. Exchange rates can move for many reasons, and forex trading involves significant risk." | Recap: \nForex = currency exchange \nPairs compare two currencies \nPrices move for many reasons \nRisk is essential to

understand |

| 6:30-6:55 | Final screen. Calm background. Include disclaimer reminder in readable text. | "Use this video as a starting point for learning, not as a signal to trade. If you continue studying forex, focus on education, risk management concepts, and understanding how markets work before making any financial decisions." | Next step: keep learning before acting \nEducational content only - not financial advice |

| 6:55-7:05 | End card with final risk reminder. | "Forex trading involves significant risk. Always review the risks carefully and seek qualified guidance if needed." | Forex trading involves significant risk. |

Visual style guide:

- Use a clean educational style with simple icons, diagrams, and minimal text.
- Do not show luxury imagery, cash piles, "easy profit" visuals, countdown timers, or emotional trading scenes.
- Do not use real brokerage interfaces, live price charts, or performance claims unless separately approved.
- Label every numerical example as hypothetical and educational.
- Keep charts simple and conceptual; avoid suggesting a trade setup or prediction.

Suggested learner engagement moments:

- At 1:05, ask learners to "watch for the first and second currency in the pair."
- At 4:45, include the "pause and check" risk checklist.
- At 5:10, include the knowledge check on base and quote currency.
- At the end, invite learners to continue with the next educational module only if available and approved.

Learning Objectives

By the end of this video, learners should be able to:

1. Define forex in simple terms.
2. Explain what a currency pair is.
3. Understand the difference between the base currency and quote currency.
4. Identify common reasons exchange rates move.
5. Recognize key risks, including leverage, volatility, and the possibility of loss.
6. Know that forex education is not the same as financial advice.

How the video supports each objective:

| Objective | Where it is taught | How understanding is checked or reinforced |

|---|---|---|

Define forex in simple terms	0:40-1:05	Recap at 6:00
Explain what a currency pair is	1:05-1:35	Diagram and labeled example
Understand base and quote currency	1:35-2:05	Knowledge check at 5:10
Identify why exchange rates move	2:30-3:30	Icons and supply/demand explanation
Recognize key risks	3:30-4:45	Risk checklist at 4:45
Separate education from advice	0:20-0:40 and 6:30-7:05	Final reminder and risk notice

Knowledge check:

- Question: In the pair GBP/USD, which currency is the base currency?
- Correct answer: GBP.
- Explanation: The base currency is the first currency in a currency pair. The quote currency is the second currency.

Optional follow-up prompt:

"Write down one thing that can cause exchange rates to move, and one risk that beginners should understand before exploring forex further."

Required Risk Disclaimer

On-screen and narrated near the beginning:

Forex trading involves significant risk and may not be suitable for everyone. Prices can move quickly, and using leverage can amplify both gains and losses. This video is for educational purposes only and is not financial, investment, or trading advice.

Production requirement: Keep the disclaimer on screen long enough to read comfortably. Use plain language, high contrast, and captions. Do not hide or minimize the disclaimer with music, animation, or small text.

Recommended placement and treatment:

- Timing: 0:20-0:40, immediately after the opening hook and before the main instructional content.
- Format: Full-screen risk notice with narrated voiceover and matching captions.
- Readability: Large, high-contrast text with generous spacing.
- Audio: No distracting music, sound effects, or fast transitions during the disclaimer.
- Duration: Long enough for an average viewer to read the full text comfortably.
- Repeat reminder: Include a shorter risk reminder near the end of the video.
- Approval status: This wording is a draft for production planning and must be reviewed and

approved by legal/compliance before release.

End-screen reminder:

Forex trading involves significant risk. This video is for educational purposes only and is not financial, investment, or trading advice.
